SIGNHIFY OMNIGTM: COMPLETE MASTER COMPENDIUM, PRD, TRD & AUTONOMOUS AI-AGENT BUILDER BIBLE

Owner: Piyush Raj Singh (Signhify Studio · github.com/Warriorlegacy · linkedin.com/in/piyushraj-singh) · Strict Budget: ₹0.00 / Month

Prepared for: Piyush Raj Singh · Founder & Lead AI Engineer, Signhify Studio
Primary GitHub: github.com/Warriorlegacy · **LinkedIn:** linkedin.com/in/piyushraj-singh
New Flagship Project Name: Signhify OmniGTM (`Warriorlegacy/signhify-omnigtm`)
Operating Budget: ₹0.00 / $0.00 per Month (100% Free & Open-Source Verified Stack)

PART 1: OFFICIAL PROJECT NAME & MASTER AUTONOMOUS AI-AGENT BUILDING PROMPT

1.1 Official Project Name & Repository Identity

- **Official Product Name: Signhify OmniGTM** *(The Open-Source Autonomous GTM, 60 FPS Video/3D & MCP Growth OS)*
- **Canonical GitHub Repository Name:** `Warriorlegacy/signhify-omnigtm`
- **NPM / CLI / MCP Package Name:** `@signhify/omnigtm-mcp` (`npx @signhify/omnigtm-mcp`)
- **Primary Live Domains:**
- **Command Center & Outbound OS:** `https://autogtm-web.vercel.app` (migrating commercial edge routes to `https://omnigtm.signhify.dpdns.org` on Cloudflare Pages/Workers)
- **60 FPS 3D Scroll Preview Studio:** `https://signhify.dpdns.org`
- **Why This Name Wins Both $150K+ Remote Jobs & B2B Clients:**
- **For Technical Recruiters & CTOs (`Mastra`, `Exa`, `Infisical`, `Pond AI`, `Radar Labs`, `Langfuse`):** Signals an enterprise-grade, multi-agent TypeScript + Python system with native Model Context Protocol (MCP) tool governance, a 4-tier zero-cost LLM failover router, and a 7/7 deterministic RAG evaluation harness.
- **For B2B Agency & Startup Clients (`Plus Render`, `3DAV UK`, `Stride Health`, `Hex Digital`):** Unifies your 60 FPS 3D WebGL preview generator (`Signhify`), your multi-mailbox outbound relay (`autoGTM`), and your 60 FPS social video engine (`Autogram` + `AutoReels AI`) under your flagship **Signhify Studio** brand.

1.2 Exact Step-by-Step "What To Do Next" Checklist (Execute in This Exact Order)

Action Block 1: Tonight / Next 60 Minutes (Security Lockdown & Portfolio Fix — ₹0 Cost)

1. **Rotate Exposed Secrets in GitGuardian & Providers (15 mins):**
2. Open Supabase Dashboard → rotate the `service_role` JWT secret leaked in `Warriorlegacy/sewarthpathsansthanam` and `TuitionTrack`.
3. Rotate the PostgreSQL password (`925a501`) and `X-API-Key` secrets (`6c29685`) in `Warriorlegacy/autogtm`.
4. Delete the over-permissive classic `Examastra` GitHub PAT in GitHub Settings → Developer Settings.
5. Set `Warriorlegacy/signhify-autopilot` repository visibility to **Private** so technical recruiters cannot see ATS auto-apply bot code on your public profile.
6. **Stop Render Free-Tier Exhaustion & Merge `Autogram` PR #1 (15 mins):**
7. Log into Render Dashboard and delete/suspend duplicate and crash-looping services: `autogram-dashboard` (`srv-dah759e1egvs73csup90`), `signhify-ai-v2`, `signhify-ai-v3`, `dxfvec` (`srv-d91suiho3t8c73eksrl0`), `signhify-autopilot-demo`, and `sports-exchange-backend`.
8. Mark Warriorlegacy/Autogram#1 as **Ready for Review** and merge it to `main`.
9. **Fix Your Broken Portfolio Redirect & Update LinkedIn/Resume (15 mins):**
0. In Vercel, add a permanent `308` redirect on `piyush-portfolio-ebon.vercel.app` pointing to `https://signhify.dpdns.org` (since your sent Nov 3–4 founder emails link to `piyush-portfolio-ebon.vercel.app`).
1. Remove `https://web-two-gamma-49.vercel.app` (*"Experimental App"*) from your Resume and point your primary GitHub link to `https://github.com/Warriorlegacy`.

2. Copy-paste the optimized Headline, About, Featured links, and Experience descriptions from **Part 6 (`CAREER_AND_PORTFOLIO_STRATEGY.md`)** below directly onto linkedin.com/in/piyushraj-singh.
3. **Feed the Master Autonomous Prompt (Section 1.3 Below) to Your AI Coding Agent (15 mins):**
4. Create/clone `Warriorlegacy/signhify-omnigtm` locally, open Claude Code / Cursor / Windsurf / Google Antigravity, and paste the **Master Autonomous Building Prompt** from Section 1.3 below to scaffold, merge, test, and verify the entire monorepo automatically.

Action Block 2: Next 48 Hours (Submit 12 High-Fit Remote Jobs & Send 15 B2B 3D Previews)

1. **Submit the 12 Researched Remote Roles in Your Tracker (2 hours total — 6 roles/day):**
2. Submit formal portal applications for **Mastra** ($140K–$200K), **Exa** ($150K–$250K), **Infisical** ($180K–$250K), **YipitData** (Remote India), **Synthio Labs** (YC Remote India), **Langfuse**, **Deel**, **Keywords Studios**, **CrowdStrike**, **Stream**, **Charge Robotics**, and **Radar Labs**.
3. **Send 15 Custom "60 FPS 3D Scroll Preview" Emails to Close Your First $1,500–$3,500 Sprint:**
4. Take an 8-second MP4 clip from warm leads in your tracker (Stride Health, Plus Render, 3DAV UK, Hex Digital), run the `Signhify` 60 FPS frame-interpolation preview generator, and send them the live preview link via `autoGTM` pitching a **$1,500 (48-hour 3D Hero Component)** or **$3,500 (7-Day Full 3D Microsite + AI Concierge)** sprint.

Action Block 3: Days 3 to 7 (Turn On Social Reels, LinkedIn & YouTube Autopilot)

1. Enable `.github/workflows/omnigtm-daily-pipeline.yml` in `Warriorlegacy/signhify-omnigtm` (public repo = unlimited free GitHub Actions minutes).
2. Let the pipeline automatically render and publish **1–2 60 FPS Remotion Architecture Reels/day** to Instagram (`@signhify.studio`), LinkedIn, and YouTube Shorts, plus **2 Long-Form (8–12 min) YouTube architectural deep-dives/week** with `status.containsSyntheticMedia: true` and automated Comment-to-DM lead capture (`"Comment FOSS"`).

1.3 COPY-PASTE MASTER AUTONOMOUS AI-AGENT BUILDING PROMPT (Give This Directly to Claude Code / Cursor / Windsurf / Antigravity)

Copy everything inside the code block below and paste it directly into your AI coding agent (`CLAUDE.md`, `.cursorrules`, or your primary agent prompt) to autonomously build, merge, test, and verify **Signhify OmniGTM**:

```
# SYSTEM ROLE & AUTONOMOUS EXECUTION DIRECTIVE: BUILD "SIGNHIFY OMNIGTM" (`Warriorlegacy/signhify-omnigtm`)

You are an autonomous Principal Full-Stack & Agentic Systems Architect. Your mission is to build, consolidate, test, and verify **Signhify OmniGTM** (`Warriorlegacy/signhify-omnigtm`) — the Open-Source Autonomous GTM, Programmatic 60 FPS Video/3D Microsite & Model Context Protocol (MCP) Growth OS for Signhify Studio.

## 1. NON-NEGOTIABLE CONSTRAINTS (₹0 / $0.00 BUDGET & SECURITY GATE)
1. **Strict ₹0 Infrastructure Stack**:
   - Web & Edge API: Next.js 15 App Router + Cloudflare Pages & Workers Free (100K req/day, commercial-safe; do NOT rely on Vercel Hobby for commercial monetization).
   - Database & S3 Storage: Supabase Free Tier (500MB PostgreSQL + `pgvector` + Row-Level Security, kept awake via 72-hour GitHub Actions cron) + Neon Serverless Postgres Free Tier (1GB DB + 5GB S3-compatible Object Storage, scales to zero, never pauses, zero credit card).
   - Zero-Cost Multi-Model AI Router: Cascade `Google AI Studio Free (gemini-2.5-flash / gemini-3.8-flash)` -> `Groq Cloud Free LPU (qwen/qwen3.8-27b & whisper-large-v3-turbo)` -> `OpenRouter (:free models)` -> `Local Ollama (qwen2.5-coder:7b / gemma4)`. Never use paid-card-gated trials like Cerebras.
   - Programmatic 60 FPS Video & Audio: `Remotion` (v5.0 Free License for teams <=3 people) + `Manim Community` (MIT) + `FFmpeg` + `Kokoro-82M` (Apache-2.0 CPU neural TTS, 24kHz) + `Whisper.cpp` (MIT word-level DTW timestamps). Never use non-commercial `Edge-TTS`.
   - Outbound & Social Publishing APIs: `Brevo Free SMTP/API` (300 emails/day = 9,000/mo) + Least-Sent Gmail OAuth Pool + `Instagram Graph API` (100 posts/24h + Private Replies Comment-to-DM) + `LinkedIn Posts API` (150 req/day) + `YouTube Data API v3` (100 `videos.insert` uploads/day dedicated bucket with `status.containsSyntheticMedia: true`).
2. **Zero Plaintext Secret Fallbacks**:
   - NEVER write `process.env.SECRET || "hardcoded_fallback"` or `os.getenv("KEY", "default_secret")`.
   - Always use `require_secret(key)` which throws a `ConfigurationError` in production if a secret is missing, and only injects deterministic mock values when `OMNIGTM_OFFLINE_TEST=1`.
3. **Never Commit Mutable State to Git**:
   - NEVER commit `topic_history` or run logs via `git commit` to `main` (which previously caused 100+ failed Render deployment loops in `Warriorlegacy/Autogram`). Persist all state in the PostgreSQL `content_items` and `opportunities` tables.

## 2. MONOREPO DIRECTORY ARCHITECTURE TO SCAFFOLD
Create the following exact structure:
```text
signhify-omnigtm/
├── .github/workflows/
```
```

```
│   ├── ci-verify-and-eval.yml         # Typecheck, Offline API tests, Playwright E2E, 7/7 RAG Evals, gitleaks
│   ├── omnigtm-daily-pipeline.yml     # 72h Supabase Keepalive + Daily ATS/B2B Harvest + 60FPS Reel Render
│   └── token-refresh.yml              # 50-day OAuth refresh for 60-day IG Graph & LinkedIn tokens
├── apps/
│   ├── web-dashboard/                 # Next.js 15 App Router Command Center (Pipeline, Reels Queue, Eval Telemetry)

├── .env.example
├── package.json
├── requirements.txt
└── README.md
```

3. STEP-BY-STEP AUTONOMOUS IMPLEMENTATION SEQUENCE

STEP 1: Database Schema Migration (`supabase/migrations/001_init_omnigtm.sql`)

Write the complete PostgreSQL + `pgvector` + Row-Level Security (RLS) migration creating: 1. `workspaces` (id, owner_user_id, slug, display_name, encrypted_api_keys JSONB using AES-256-GCM, daily_email_cap, daily_ig_dm_cap). 2. `opportunities` (id, workspace_id, idempotency_key UNIQUE SHA-256, track CHECK IN ('B2B_SPRINT', 'REMOTE_JOB'), company_name, decision_maker_name, decision_maker_role, contact_email, company_url, ats_or_source_url, pain_point_summary, preview_asset_url, fit_score, stage, embedding vector(768)). 3. `outreach_events` (id, opportunity_id, sender_mailbox, relay_provider CHECK IN ('GMAIL_OAUTH', 'BREVO_SMTP'), sequence_step, subject, body_text, message_id_header, status, sent_at). 4. `content_items` (id, workspace_id, topic_hash UNIQUE, pillar, title, hook_line, script_json JSONB, virality_score CHECK BETWEEN 0 AND 100, mp4_storage_url, thumbnail_url, cta_keyword DEFAULT 'FOSS', ig_media_id, linkedin_urn, youtube_video_id, status, published_at). 5. `social_comments_dm_log` (id, content_item_id, platform, external_comment_id UNIQUE, commenter_handle, matched_keyword, dm_sent_at). 6. `llm_eval_runs` (id, git_commit_sha, provider_used, total_cases, passed_cases, faithfulness_score, p95_latency_ms). 7. `healthcheck_heartbeat` (id INT PRIMARY KEY DEFAULT 1, last_ping_at TIMESTAMPTZ, runner_info TEXT).

STEP 2: Zero-Cost Multi-Model AI Router & 7/7 Evaluation Suite (`packages/ai-gateway/llm_router_and_eval.py`)

Implement the circuit-breaker router and deterministic evaluation suite that verifies all 7 `ecc-tools` readiness dimensions: - `ECC-01`: Zero Plaintext Secret Fallback Gate (`ConfigurationError` when production env var is absent). - `ECC-02`: Multi-Provider HTTP 429 Failover Cascade (`Gemini 2.5 Flash` → `Groq LPU` → `OpenRouter :free` → `Local Ollama` in <350ms). - `ECC-03`: Virality Gate Rubric (`virality_score >= 85` and `"Comment \"FOSS\""` CTA enforcement). - `ECC-04`: RAG Citation Groundedness & Faithfulness (`>= 0.92` verbatim source chunk preservation). - `ECC-05`: PII & Credential Output Redaction Guard (scrubs `postgresql://...`, `sk-...`, `AIza...` across both summaries and citations). - `ECC-06`: Piyush Raj Singh Voice Card Register & Anti-Spam Compliance (enforces `"No pressure or sales pitch at all"` and `"Reply STOP"` opt-out; bans `"I hope this email finds you well"`). - `ECC-07`: Deterministic 24-char SHA-256 Idempotency Key & Sub-500ms Latency SLA.

STEP 3: Direct ATS & B2B Signal Harvester + Outbound FreeRelay (`packages/outbound-engine/`)

1. Implement `harvester.py` to poll unauthenticated JSON endpoints:
2. Greenhouse: `https://boards-api.greenhouse.io/v1/boards/{token}/jobs?content=true`
3. Lever: `https://api.lever.co/v0/postings/{site}?mode=json`
4. Ashby: `https://jobs.ashbyhq.com/{org}` (extracting `__appData` JSON)
5. B2B Agency / Startup RSS & directories.
6. Score each item with Pydantic structured outputs (`fit_score 0..100`) and upsert via `idempotency_key`.
7. Implement `relay.py` with least-sent mailbox load balancing across connected Gmail OAuth accounts (capped at 35/day per inbox) and Brevo SMTP (`smtp-relay.brevo.com:587`, capped at 150–300/day), checking `status != 'SUPPRESSED'` before every dispatch.

STEP 4: 60 FPS 3D Scroll Preview Slicer & Remotion Video Engine (`packages/media-engine/`)

1. **8s Video-to-60FPS 3D Scroll Slicer (`slice_3d_frames.py`)**:
2. Executes `ffmpeg -i input.mp4 -vf "fps=60,scale=1280:-2" -c:v libwebp -q:v 80 frames/frame_%04d.webp` to extract 360–480 progressive WebP frames (~3.5–4.5 MB total).
3. Pairs with `apps/viewer-3d` HTML5 `<canvas>` renderer that preloads frames and interpolates `currentFrame = Math.floor(scrollProgress * totalFrames)` inside `requestAnimationFrame` at 60 FPS with zero Three.js bundle overhead.

4. **Programmatic 60 FPS Social Reels & YouTube Engine (`RemotionArchitectureReel.tsx`)**:
5. Synthesizes narration WAV via `Kokoro-82M` (Apache-2.0 CPU).
6. Extracts millisecond word DTW timestamps via `whisper-cli -m models/ggml-base.en.bin -f audio.wav --max-len 1 -dtw base.en -oj`.
7. Renders 1080×1920 (9:16 Reels/Shorts) and 1920×1080 (16:9 YouTube) MP4s at 60 FPS using Remotion across 4 synchronized scenes: Contrarian Cost Hook → Animated Architecture Graph → 60 FPS Terminal Docker Compose Typing → `"Comment FOSS"` Auto-DM CTA.
8. **Official API Publisher (`publisher.py`)**:
9. Instagram Graph API: `POST /{ig-user-id}/media` (`media_type=REELS`) → poll `FINISHED` → `POST /{ig-user-id}/media_publish` + Private Reply webhook handler (`POST /{ig-user-id}/messages`) triggered by `"FOSS"`, `"3D"`, or `"ARCH"` comments.
0. LinkedIn Posts API: `POST https://api.linkedin.com/rest/posts` with `LinkedIn-Version: 202610`.
1. YouTube Data API v3: `POST https://www.googleapis.com/upload/youtube/v3/videos?uploadType=resumable&part=snippet,status` with `"status": {"containsSyntheticMedia": true, "selfDeclaredMadeForKids": false}`.

STEP 5: Model Context Protocol (MCP) Server (`packages/mcp-server/index.ts`)

Expose 4 standardized MCP tools over STDIO and SSE with declarative policy hooks (`allow` | `deny` | `ask_user`): - `omnigtm.search_opportunities` (`policy: allow`) - `omnigtm.build_3d_preview` (`policy: allow`) - `omnigtm.render_social_reel` (`policy: allow`) - `omnigtm.dispatch_outreach` (`policy: ask_user` — requires explicit human approval before live external email dispatch).

STEP 6: Verification Gate (Run Before Completing)

Execute all tests locally and verify 0 errors: 1. `python3 packages/ai-gateway/llm_router_and_eval.py` → Must output `TOTAL READINESS SCORE: 7/7 PASSED`. 2. Verify zero hardcoded secrets across the repository (`grep -rnE "postgres://|sk-|AIza" .` returns 0 matches outside `.env.example` redaction tests). 3. Verify `.github/workflows/omnigtm-daily-pipeline.yml` syntax is valid.

```
# PART 2: MASTER ROADMAP (`MASTER_ROADMAP.md`)

# MASTER ROADMAP: ZERO-BUDGET CAREER, PRODUCT & BUSINESS GROWTH ENGINE
**Owner:** Piyush Raj Singh · Founder & Lead AI Engineer, [Signhify Studio](https://signhify.dpdns.org)
**Primary GitHub:** [github.com/Warriorlegacy](https://github.com/Warriorlegacy) · **Secondary GitHub:**
[github.com/piyushrajsingh092](https://github.com/piyushrajsingh092) · **Legacy ML GitHub:** [github.com/singhh-piyush]
(https://github.com/singhh-piyush)
**LinkedIn:** [linkedin.com/in/piyushraj-singh](https://www.linkedin.com/in/piyushraj-singh) · **Operating Budget
Constraint:** **₹0 / $0.00 (Strict Non-Negotiable)**

## 1. Executive Summary & Strategic Architecture

Your current workspace and engineering footprint already contain over 25 deployed applications, autonomous pipelines
(`Warriorlegacy/Autogram`, `Warriorlegacy/autogtm`, `Warriorlegacy/signhify-ai`, `AutoReels AI`, `Signhify 3D
Builder`), and an active [135-lead international B2B client & remote job pipeline]
(https://docs.google.com/spreadsheets/d/1ogy9-w1OHF3J26M_Da2Tj_nHvq7uy2HlfDRkxZOjc4s/edit). However, four critical
bottlenecks are currently holding back both your remote job callbacks and recurring SaaS revenue:

1. **Systemic Secret Exposure (50+ GitGuardian Alerts Across 11 Repos)**: Exposed PostgreSQL URIs, Supabase
`service_role` JWTs, Google Cloud/Gemini keys, OpenRouter keys, and `X-API-Key` credentials in `autogtm`, `Autogram`,
`CRM`, `pixel-perfect-pixel`, `sewarthpathsansthanam`, and `Sports_Betting_Specifications`.
2. **Infrastructure & CI/CD Fragmentation**: Running 9+ services simultaneously on a single Render workspace exhausted
your 750 free monthly hours, while committing mutable topic-history state directly to `main` in
`Warriorlegacy/Autogram` triggered 100+ failed Render builds.
3. **Identity & Portfolio Mismatch**: Your [Resume v3]
(https://docs.google.com/document/d/1tpAG7lbt7QMPCXpPyywE3aIglSRX09_9eq7VIVmpK6U/edit) points to
`github.com/piyushrajsingh092` and includes an unbranded sandbox slug (`https://web-two-gamma-49.vercel.app`), while
your real CI/CD pipelines and 2026 flagship code live on `github.com/Warriorlegacy` and your cold outreach emails
reference an inaccessible legacy portfolio URL (`piyush-portfolio-ebon.vercel.app`).
4. **Unconsolidated Product Value**: Instead of maintaining fragmented scripts across `Autogram`, `Autoshorts`,
`autotube`, `autoreels-ai`, and `autogtm`, consolidating them into one unified flagship platform (**OmniGTM — Open-
Source Autonomous GTM, Programmatic Video & MCP Agent Platform**) creates a category-defining portfolio piece while
powering Signhify Studio's customer acquisition at ₹0 cost.

## 2. Phased Master Execution Plan (Phases 0–8)

| Phase | Core Objective | Key Tasks & Deliverables | Dependencies | Required ₹0 Technologies | Estimated Effort |
Completion Criteria & Measurable KPIs |
| :--- | :--- | :--- | :--- | :--- | :--- |
| **Phase 0 & 1: Security Lockdown & Asset Consolidation** | Eliminate all 50+ leaked secrets, stop Render/GitHub
```

Actions crash loops, and unify GitHub/portfolio identity. | 1. Rotate leaked DB/API keys in [GitGuardian](https://dashboard.gitguardian.com) (`sewarthpathsansthanam` Supabase JWTs, `autogtm` Postgres/API keys, `Autogram` tokens).
2. Merge [Autogram PR #1](https://github.com/Warriorlegacy/Autogram/pull/1) and scrub git history with `git filter-repo`.
3. Delete duplicate Render services (`signhify-ai-v2`/`-v3`, `dxfvec`, `signhify-autopilot-demo`).
4. Remove `web-two-gamma-49.vercel.app` from resume; 301-redirect `piyush-portfolio-ebon.vercel.app` to `signhify.dpdns.org`. | Access to GitHub (`Warriorlegacy`), Supabase, Render, and Vercel dashboards. | `git-filter-repo`, GitHub Secret Scanning, Cloudflare Pages/Redirect Rules, Supabase Free Tier. | Days 1–2 (8 hours) | • **0 active unrotated secrets** in GitGuardian.
• **100% green CI badges** on pinned repositories.
• Render monthly instance usage **< 400 hrs/mo** (1 active service max). |
Phase 2 & 3: Career Repositioning & Immediate Job Execution	Align LinkedIn, GitHub, and Resume around Senior/Founding Full-Stack AI & Agentic Systems Engineering and submit pending high-match roles.	1. Update [LinkedIn Profile](https://www.linkedin.com/in/piyushraj-singh) with copy-paste replacement Headline, About, Featured, and Experience sections. 2. Standardize education, phone (`+91 6202442690`), and primary GitHub (`Warriorlegacy`) across all CV variants. 3. Submit the **12 researched high-fit remote roles** (`Mastra`, `Exa`, `Infisical`, `YipitData`, `Synthio Labs`, `Deel`, `Langfuse`, etc.) in your [Tracker](https://docs.google.com/spreadsheets/d/1ogy9-w1OHF3J26M_Da2Tj_nHvq7uy2HlfDRkxZOjc4s/edit).	Phase 1 portfolio URL fix and green GitHub badges.	Greenhouse/Lever/Ashby direct JSON endpoints, Loopback CDP (`127.0.0.1:9222`), Playwright, Brevo FreeRelay.	Days 2–4 (6 hours)	• **12 pending applications submitted** + **5 new tailored applications/day**. • **5 founder proof-of-work emails/day** dispatched via `autoGTM`. • Target KPI: **3–5 technical interviews booked within 21 days**.
Phase 4: Fast-Cash B2B Productized Service Launch	Generate immediate cash flow ($1,500–$4,500/sprint) using your existing [Signhify 3D Engine](https://signhify.dpdns.org) and 135-lead pipeline.	1. Package **"60 FPS 3D Scroll Launchpad + Grounded AI Concierge"** (48h Hero Sprint at $1,500; 7-Day Full Microsite at $3,500). 2. Replace mocked `/api/ai/stream` and `/api/marketplace/download` routes in `Warriorlegacy/Signhify#1` with real Supabase + Stripe/PayPal logic. 3. Send custom 60 FPS spec previews to warm leads ([Stride Health](https://getstride.com), [Plus Render](https://plusrender.com/3d-rendering-miami/), [3DAV UK](https://www.3darchitecturevisualization.co.uk/blog/category/property-marketing.html)).	Working `signhify.dpdns.org` preview route + `autogtm` Brevo SMTP relay.	Next.js, Tailwind CSS, FFmpeg frame extractor, Cloudflare Pages, Supabase, Brevo (300/day free).	Days 4–7 (10 hours)	• **15 custom 3D spec previews/week** sent to CGI/Webflow agencies & funded startups. • Target KPI: **1–2 paid pilot sprints closed ($1,500–$4,500) within 30 days**.
Phase 5: Flagship Product Development (`OmniGTM` Monorepo)	Merge `autoGTM` + `Autogram` + `AutoReels AI` + `rea_job_engine.py` into a single open-source Flagship Platform (`Warriorlegacy/omnigtm`).	1. Implement the 4-layer architecture defined in `PRD.md` and `TRD.md`. 2. Move `Autogram` topic history from git commits to Supabase/Neon Postgres to stop Render build loops. 3. Add the 7 `ecc-tools` RAG & deterministic evaluation fixtures (`evaluator-rag-corpus.ts`) to prove senior AI engineering rigor. 4. Publish MCP Server package (`omnigtm-mcp`) with policy guardrails.	Phase 1 repo cleanup.	Turborepo, Next.js 15 (Cloudflare Pages), FastAPI, Supabase/Neon Postgres + `pgvector`, Gemini 2.5/3.8 Flash + Groq Free APIs, MCP SDK.	Days 7–16 (25 hours)	• **1 unified flagship monorepo** passing 100% of unit, API, E2E buyer walkthrough, and LLM eval tests. • **"Show HN" launch** on Hacker News & Product Hunt.
Phase 6 & 7: Autonomous GTM, Social Media & YouTube Engine	Run Signhify Studio's Instagram, LinkedIn, and YouTube channels on autopilot at ₹0 cost using programmatic motion graphics.	1. Deploy the Remotion + Manim + FFmpeg + Kokoro-82M TTS + Whisper.cpp word-caption pipeline inside public GitHub Actions. 2. Automate daily publishing via official **Instagram Graph API** (100 posts/24h), **LinkedIn Posts API** (150/day), and **YouTube Data API v3** (100 uploads/day bucket). 3. Enforce Comment-to-DM lead capture (`"Comment FOSS"`) writing directly into Supabase CRM.	Instagram Professional Account, LinkedIn App (`w_member_social`), Google Cloud OAuth verification for YouTube.	Remotion (Free ≤3 team license), Kokoro-82M (Apache-2.0), Whisper.cpp (MIT), FFmpeg, GitHub Actions (unlimited public repo mins).	Days 16–24 (20 hours)	• **1–2 high-retention animated Reels/Shorts + 1 LinkedIn carousel/day**. • **2 long-form YouTube architectural deep-dives/week** (100% YPP policy-compliant). • **50+ inbound DM leads/month**.
Phase 8: Scale, Monetization & Revenue Optimization	Convert open-source traction, content reach, and agency cash flow into recurring SaaS MRR and international compensation.	1. Launch hosted **OmniGTM Cloud / BYOK Pro Tier** ($29–$79/mo) on Cloudflare + Neon Postgres. 2. Offer white-label **GymFlow SaaS** subscriptions (₹1,999/mo) and **Signhify AI Growth Retainers** ($999–$1,500/mo). 3. Review weekly KPIs in `MASTER_PROGRESS.md`.	Phases 4–7 live in production.	Cloudflare Pages/Workers, Neon Serverless Postgres, Lemonsqueezy / Stripe / PayPal (0 monthly fixed fee).	Days 25–30+ (Ongoing)	• **$3,000–$10,000+/mo combined income** (Remote Role + B2B Sprints + Micro-SaaS MRR) at **₹0 fixed infrastructure cost**.

3. Risk Register & Zero-Budget Mitigations

Risk Factor	Severity	Root Cause	Concrete Zero-Budget Mitigation
Vercel Hobby Commercial Ban	High	[Vercel Hobby Fair Use](https://vercel.com/docs/plans/hobby) prohibits commercial monetization.	Host all commercial SaaS frontends and client microsites on **[Cloudflare Pages & Workers Free](https://developers.cloudflare.com/workers/platform/pricing/)** (100% commercial-friendly, unlimited static bandwidth, no credit card).
Supabase 7-Day Inactivity Pause	High	Free Supabase projects pause after 7 days without database reads/writes.	Consolidate onto **2 active Supabase projects** and run a single centralized GitHub Actions cron (`0 4 */3 * *`) that inserts/updates a heartbeat row every 72 hours, or use **[Neon Free Tier](https://neon.com/docs/introduction/plans)** (scales to zero after 5m, never pauses).
YouTube Unverified App `private` Upload Lock	Medium	Post-2020 Google Cloud projects lock API uploads to `private` until passing a free audit.	Submit the free **[YouTube API Compliance Audit](https://developers.google.com/youtube/data/guides/quota_and_compliance_audits)** early in Phase 6; while pending, let the pipeline upload videos as `private` with pre-filled titles, descriptions, chapters, thumbnails, and `containsSyntheticMedia: true`, then toggle to `public` in 1 click inside YouTube Studio.

| **YouTube "Inauthentic Content" Demonetization** | High | July 2025 / 2026 YPP policy rejects mass-produced, templated AI slideshows. | Use **code-driven Remotion + Manim architectural animations**, real terminal/IDE screen recordings captured via Playwright, custom voice pacing (Kokoro-82M), and human-reviewed scripts grounded in real GitHub benchmarks. |

PART 3: IMPLEMENTATION PLAN & 72-HOUR TRIAGE (`IMPLEMENTATION_PLAN.md`)

IMPLEMENTATION PLAN & PRIORITIZED ENGINEERING BACKLOG
Owner: Piyush Raj Singh (github.com/Warriorlegacy) · **Budget:** ₹0

1. Immediate 72-Hour Triage & Security Remediation Checklist

Before writing new features, execute these exact non-destructive engineering fixes across your existing repositories to eliminate credential leaks, stop Render free-tier exhaustion, and turn failing GitHub Actions badges green:

Step 1.1: Credential Rotation & History Scrubbing (Priority P0 — Hour 1 to Hour 3)
1. **Supabase `service_role` JWT Rotation (`Warriorlegacy/sewarthpathsansthanam` & `TuitionTrack`)**:
   - Open your [Supabase Dashboard](https://supabase.com/dashboard) -> Project Settings -> API -> **Generate New JWT Secret** for the project tied to commits `2e18625` and `b9ccff7` ([GitGuardian Alert](https://mail.google.com/mail/u/0/#inbox/19ee594672cd3873)).
2. **`Warriorlegacy/autogtm` Secret Rotation**:
   - Rotate the PostgreSQL database password exposed in commit `925a501` ([Alert](https://mail.google.com/mail/u/0/#inbox/1a1971c5302f70a0)) and the two `X-API-Key` secrets exposed in commit `6c29685` ([Alert](https://mail.google.com/mail/u/0/#inbox/1a19722e7293c018)).
3. **Merge `Warriorlegacy/Autogram#1` & Scrub History**:
   - Rotate the GitHub PAT (`3d75881`), Instagram access token, and Render API keys (`autogram`, `Kilo_Autogram`).
   - Mark [Warriorlegacy/Autogram#1](https://github.com/Warriorlegacy/Autogram/pull/1) (*"Phase 0 security: remove plaintext secret fallbacks"*) as **Ready for Review** so `coderabbitai[bot]` completes review, then merge to `main`.
   - Run `git filter-repo` locally across `Autogram`, `autogtm`, `CRM`, and `pixel-perfect-pixel` to purge historical `.env` and hardcoded secret literals:
     ```bash
     pip install git-filter-repo
     git filter-repo --replace-text replacements.txt --force
     git push origin --force --all
     ```
4. **Revoke Over-Permissive Tokens**:
   - In GitHub Settings -> Developer Settings -> Personal Access Tokens, delete the classic `Examastra` token with `admin:enterprise` and `admin:org` scopes ([Alert](https://mail.google.com/mail/u/0/#inbox/19eb7d5d7d804066)).
   - Make `Warriorlegacy/signhify-autopilot` **Private** immediately so recruiters cannot view your ATS auto-apply bot source code.

Step 1.2: Stop Render Free-Tier Exhaustion & Crash Loops (Priority P0 — Hour 3 to Hour 4)
1. **Delete Duplicate & Idle Render Services**:
   - Log into [Render Dashboard](https://dashboard.render.com) and delete/suspend:
     - `signhify-ai-v2` and `signhify-ai-v3` (keep only the single canonical `signhify-ai` service `srv-d8p8unpkh4rs7390rl7g` or migrate to Cloudflare Workers).
     - `dxfvec` (`srv-d91suiho3t8c73eksrl0` — crashing with OOM Exit 1).
     - `signhify-autopilot-demo` (`srv-dbavirom7kps73afmdjg` — failing builds).
     - `sports-exchange-backend` (`srv-d9v95km417fc73cedmdg` — crashing with Exit 134 SIGABRT OOM).
     - `autogram-dashboard` (`srv-dah759e1egvs73csup90` — failing 100+ deploys due to git-commit topic history).
2. **Decouple `Autogram` State from Git Commits**:
   - In `Warriorlegacy/Autogram`, remove the step in `.github/workflows/*.yml` that runs `git commit -m "chore: topic history ..."` and `git push` on `main`. Instead, read and write `topic_history` via a REST call to your Supabase `content_history` table (see `omnigtm_starter_code/`).

Step 1.3: Fix Portfolio URLs & GitHub Identity Fragmentation (Priority P0 — Hour 4 to Hour 5)
1. **Fix `piyush-portfolio-ebon.vercel.app`**:
   - In your Vercel Dashboard, either redeploy `piyush-portfolio-ebon.vercel.app` or configure a permanent `308` redirect in `vercel.json` pointing to `https://signhify.dpdns.org` so every founder clicking your sent cold emails lands on a working, high-converting showcase.
2. **Retire `https://web-two-gamma-49.vercel.app`**:
   - Remove `web-two-gamma-49.vercel.app` (*"Experimental App"*) from [Piyush Raj Singh Resume v3](https://docs.google.com/document/d/1tpAG7lbt7QMPCXpPyywE3aIglSRX09_9eq7VIVmpK6U/edit) and replace it with **[Signhify AI — 7-Agent Autonomous Workspace](https://signhify-ai-web.vercel.app/)** and **[Signhify AutoGTM](https://autogtm-web.vercel.app)**.
3. **Unify Three GitHub Accounts (`Warriorlegacy`, `piyushrajsingh092`, `singhh-piyush`)**:
   - Transfer `ResNet-Chess-Engine` from `singhh-piyush` to `Warriorlegacy`.
   - Update your README profile on `piyushrajsingh092` and your Resume header to explicitly link **github.com/Warriorlegacy** as your primary engineering namespace, pinning your 6 strongest repositories:
     1. `Warriorlegacy/omnigtm` (Unified `autogtm` + `Autogram` + `AutoReels` + MCP Server)
     2. `Warriorlegacy/signhify-ai` (7-Agent BYOK Orchestration Swarm)
     3. `Warriorlegacy/Signhify` (60 FPS 3D Scroll Website Builder + MCP Server)

4. `Warriorlegacy/gymflow-saas` (Multi-Tenant Fitness SaaS + Expo App — sub-500ms latency)
5. `Warriorlegacy/gigmind` (12-Category Marketplace with Gemini/Groq Fallback Router)
6. `Warriorlegacy/ResNet-Chess-Engine` (PyTorch Deep Learning Behavioral Cloning Engine)

2. Repository-by-Repository Engineering Fix Backlog

Repository	Current Bug / Deficiency	Exact Engineering Fix to Implement	Verification Test
`Warriorlegacy/autogtm`	`API Tests` and `Buyer Walkthrough` failing on commit `2b379ae`; `Email Providers (offline, fast)` failing on `6c29685`; `keep-warm` failing every few hours.	1. Inject mock environment variables (`DATABASE_URL`, `INTERNAL_API_KEY`, `BREVO_SMTP_KEY`) inside `.github/workflows/ci.yml` for offline test runs. 2. Update `Buyer Walkthrough` Playwright selectors to match the updated README/landing copy from `2b379ae`. 3. Replace the broken `keep-warm` URL target with the centralized Supabase heartbeat workflow.	`npm run typecheck && npm run test:api && npx playwright test` passes 100% in GitHub Actions.
`Warriorlegacy/Signhify` (`PR #1`)	`/api/ai/stream` uses a `setTimeout` mock; `/api/marketplace/download` returns mock zip URLs without auth (`P1` finding); `"Save Secrets"` lacks backend encryption; `/api/telemetry/event` allows log injection.	1. Port the real Supabase Edge Function and Stripe webhook validation from `pixel-perfect-pixel` into `/api/marketplace/download` (verify active session + purchase row before generating a signed download URL). 2. Wire `/api/ai/stream` to the `MultiModelGateway` (Gemini 2.5 Flash -> Groq fallback). 3. Sanitize newline characters (`\r`, `\n`) in `/api/telemetry/event` before logging.	Unit + integration tests verifying `401 Unauthorized` / `403 Forbidden` on unpaid download attempts and streaming SSE chunks on `/api/ai/stream`.
`Warriorlegacy/Autogram` & **`Autoshorts`**	Scheduled workflows (`auto-dm`, `reel60`, `story`, `daily-ai-reel`) failing 3x/day; `ecc-tools[bot]` flagged `0/7` reference-set readiness gaps on PR #1.	1. Merge `Autogram`, `Autoshorts`, and `autotube` into the `packages/media-engine` workspace of `OmniGTM`. 2. Add `src/analyzers/fixtures/evaluator-rag-corpus.ts` covering all 7 `ecc-tools` reference-set areas. 3. Refresh expired Instagram Graph API 60-day long-lived token via automated token-refresh cron.	`ecc-tools` Reference Set Readiness check passes `7/7`; scheduled Reel generation renders MP4 and uploads via Graph API in dry-run & live modes.
`Warriorlegacy/gymflow-saas` & **`TuitionTrack`**	`supabase-keepalive` disabled in `gymflow-saas` after 60 days; timing out after 1m 43s in `TuitionTrack`.	Unpause both databases in Supabase Dashboard and deploy the unified `supabase-keepalive.yml` workflow (included in `omnigtm_starter_code/`) with a 15-second `curl --max-time 15` timeout against `/rest/v1/healthcheck`.	GitHub Actions `supabase-keepalive` completes in `<3 seconds` every 72 hours.

3. Ready-to-Deploy Starter Code & Workflows Built in Sandbox

In `/omnigtm_starter_code/` (and presented alongside this plan), I have built and tested the foundational code modules so you can copy them directly into your repositories today:
1. **`llm_router_and_eval.py`**: Zero-cost Multi-Model AI Router chaining **Google Gemini (`gemini-2.5-flash`) -> Groq (`qwen3.8-27b` / `llama-3.3-70b`) -> OpenRouter (`:free`) -> Local Ollama** with automatic exponential backoff, token telemetry, and deterministic evaluation assertions.
2. **`RemotionArchitectureReel.tsx`**: Production 1080x1920 (9:16, 60 FPS) Remotion component that programmatically renders Signhify Studio's animated architecture breakdowns (Hook -> SaaS vs. FOSS Cost Comparison -> Animated Node Graph -> Docker Compose Terminal Typing -> `"Comment FOSS"` CTA).
3. **`omnigtm-daily-pipeline.yml`**: Complete GitHub Actions workflow orchestrating:
   - 72-hour Supabase keep-alive ping
   - Daily ATS JSON job discovery (`boards-api.greenhouse.io`, `api.lever.co`, `jobs.ashbyhq.com`)
   - Kokoro-82M voiceover + Whisper.cpp word-level captioning + Remotion 60 FPS MP4 rendering
   - Official Instagram Graph API, LinkedIn Posts API, and YouTube Data API v3 (`containsSyntheticMedia: true`) publishing.

PART 4: COMPLETE AUDIT OF EXISTING DIGITAL ASSETS (`EXISTING_ASSETS_AUDIT.md`)

COMPLETE AUDIT OF EXISTING DIGITAL ASSETS
Audited Accounts: GitHub ([Warriorlegacy](https://github.com/Warriorlegacy), [piyushrajsingh092](https://github.com/piyushrajsingh092), [singhh-piyush](https://github.com/singhh-piyush)) · Vercel · Render · LinkedIn ([linkedin.com/in/piyushraj-singh](https://www.linkedin.com/in/piyushraj-singh)) · Google Drive
Audit Date: November 4, 2026

1. Executive Audit Summary

You have built and deployed **25+ full-stack applications, multi-agent systems, media pipelines, and client platforms**. You are not a beginner starting from zero—you already possess the raw engineering output of a productive Founding AI Engineer. However, four structural issues are currently sabotaging your conversion rate with recruiters and B2B clients:

1. **Fragmented GitHub Identity Across Three Handles**: Your resume ([Piyush Raj Singh Resume v3](https://docs.google.com/document/d/1tpAG7lbt7QMPCXpPyywE3aIglSRX09_9eq7VIVmpK6U/edit)) links to github.com/piyushrajsingh092, whereas virtually all of your active 2026 repositories, CI/CD pipelines, and deployments live under github.com/Warriorlegacy ([GitHub Actions PR #1 thread](https://mail.google.com/mail/u/0/#inbox/1a1a59438ae335cb)), and your PyTorch deep-learning work (`ResNet-Chess-Engine`, `NBA-Deep-learning`, `Mueller-Report-NLP`) lives under github.com/singhh-piyush ([Resume Optimization Doc](https://docs.google.com/document/d/17dLHAwu6DowMszLuY9pIeC5eSxUQQsslEM6GqdAm_Jg/edit)).
2. **50+ Exposed Credentials Flagged by GitGuardian Across 11 Repositories**: Plaintext PostgreSQL URIs, MongoDB

credentials, Redis passwords, Supabase `service_role` JWTs, Google Cloud/Gemini keys, OpenRouter keys, and `X-API-Key` tokens were committed across `Warriorlegacy/autogtm`, `Autogram`, `CRM`, `pixel-perfect-pixel`, `sewarthpathsansthanam`, `TuitionTrack`, `signhify-ai`, `signhify-autopilot`, and `Sports_Betting_Specifications`.
3. **Render Free-Tier Exhaustion & Git-Commit Redeploy Loops**: Running 9+ web services simultaneously on Render exhausted your 750 monthly free instance hours on September 28, 2026 ([Render Alert](https://mail.google.com/mail/u/0/#inbox/1a0e906d9c4a2558)), while `Warriorlegacy/Autogram` commits topic history directly to `main` multiple times daily, triggering 100+ failed Render builds on `autogram-dashboard` ([Render Build Alert](https://mail.google.com/mail/u/0/#inbox/1a19c0e972bce921)).
4. **Inaccessible Legacy Portfolio URL in Active Cold Outreach**: Your [AI Job Auto-Apply System Research](https://docs.google.com/document/d/1FI3QEEdK42ytLIb8NLwHPwYJhL0458AVR2NKY9y1e18/edit) noted that `https://piyush-portfolio-ebon.vercel.app/` returned an inaccessible status during automated probing, yet your Nov 3–4 cold emails to [Pond AI](https://mail.google.com/mail/u/0/#inbox/1a1a58f203e57dc7), [Radar Labs](https://mail.google.com/mail/u/0/#inbox/1a1a59045fbd84dc), and [Opsfleet](https://mail.google.com/mail/u/0/#inbox/1a1a58f643bfc59d) still list it as your primary portfolio URL alongside an unbranded sandbox slug (`https://web-two-gamma-49.vercel.app`) on your resume.

2. Deep-Dive Audit of Specific Target Projects

2.1 `Warriorlegacy/Autogram` & `autogram-dashboard` (Render)
* **Purpose & Functionality**: Autonomous Instagram growth, Reels rendering, story publishing, and comment-to-DM outreach engine ([Warriorlegacy/Autogram](https://github.com/Warriorlegacy/Autogram)), paired with `autogram-dashboard` on Render ([Service `srv-dah759e1egvs73csup90`](https://dashboard.render.com/web/srv-dah759e1egvs73csup90)).
* **Existing Workflows**:
  1. `Autonomous Instagram Auto-DM Engine (Option A)` (`auto-dm` job, [Run 1a1a49033650d609](https://mail.google.com/mail/u/0/#inbox/1a1a49033650d609))
  2. `Signhify 60s Reels Autopilot — 3x Daily (Authoritative)` (`reel60` job, [Run 1a1a32971d323ace](https://mail.google.com/mail/u/0/#inbox/1a1a32971d323ace))
  3. `Daily Instagram Stories Autopilot (2x Daily)` (`story` job, [Run 1a1a2d5f62143943](https://mail.google.com/mail/u/0/#inbox/1a1a2d5f62143943))
  4. `Signhify Viral Reels — Visual Variety + Virality Gate` (`daily-ai-reel` job, [Run 1a1925782834b86a](https://mail.google.com/mail/u/0/#inbox/1a1925782834b86a))
* **Security & PR #1 Audit**:
  - [PR #1](https://github.com/Warriorlegacy/Autogram/pull/1) (*"Phase 0 security: remove plaintext secret fallbacks (DRAFT — rotate secrets before merging)"*, commit `928a45c`, [Thread 1a1a59438ae335cb](https://mail.google.com/mail/u/0/#inbox/1a1a59438ae335cb)) strips fallback secret strings in 1 file and passes `Security Evidence` and `PR Risk Taxonomy`, but remains unmerged in Draft state with `0/7` Reference Set Readiness gaps flagged by `ecc-tools[bot]`.
  - GitGuardian previously flagged a **GitHub PAT** (`3d75881`), **Username/Password** (`0d3b232`, [Thread 1a08f3ccfad29015](https://mail.google.com/mail/u/0/#inbox/1a08f3ccfad29015)), and **2x High Entropy Secrets** (`d7c3cb0`, `ee36be8`).
* **Architectural Flaw & Fix**: Storing topic history via automated git commits (`chore: topic history 2026-11-02`) triggers Render auto-deploys 3–5 times per day, all failing. **Verdict**: Merge into `OmniGTM`, store topic history in Supabase/Neon Postgres, and delete the Render `autogram-dashboard` service.

2.2 `Warriorlegacy/autogtm` & `autogtm-web.vercel.app`
* **Purpose & Functionality**: Automated B2B outbound sales, lead enrichment, and conversion pipeline ("Signhify AutoGTM FreeRelay") with web UI at autogtm-web.vercel.app.
* **Strengths**:
  - Balances cold email volume across a multi-mailbox pool (`rajpiyush092@gmail.com` and `piyushrajsingh092@gmail.com` using least-sent selection, [Thread 1a0fe2907853345e](https://mail.google.com/mail/u/0/#inbox/1a0fe2907853345e)) + Brevo SMTP relay (`12627897.brevosend.com`, 300 free emails/day, [Thread 1a0fa5d05a7d79d7](https://mail.google.com/mail/u/0/#inbox/1a0fa5d05a7d79d7)).
  - Verified end-to-end conversion loop (`draft -> send -> reply -> booking`, [Thread 1a0f7de46b65e641](https://mail.google.com/mail/u/0/#inbox/1a0f7de46b65e641)).
  - Passed a 43-page OpenSEO audit with **0 critical issues and 0 warnings** ([Thread 1a19740e3769d71f](https://mail.google.com/mail/u/0/#inbox/1a19740e3769d71f)).
* **Bugs & Security Issues**:
  - On commit `2b379ae` (*"docs: rewrite README around autonomous GTM positioning"*), `Web Build & Typecheck` passed, but `API Tests` and `Buyer Walkthrough` failed with 3 annotations each ([Thread 1a19737e0a1ac418](https://mail.google.com/mail/u/0/#inbox/1a19737e0a1ac418)), and `Email Providers` failed on commit `6c29685` ([Thread 1a1969351515590f](https://mail.google.com/mail/u/0/#inbox/1a1969351515590f)).
  - GitGuardian flagged **2x `X-API-Key` secrets** (`6c29685`, [Thread 1a19722e7293c018](https://mail.google.com/mail/u/0/#inbox/1a19722e7293c018)) and **PostgreSQL credentials** (`925a501`, [Thread 1a1971c5302f70a0](https://mail.google.com/mail/u/0/#inbox/1a1971c5302f70a0)) on Nov 1, 2026.
* **Verdict**: Your #1 B2B revenue and growth-engineering asset. Rotate keys, fix the CI test fixtures, and expand it into the `OmniGTM` flagship monorepo.

2.3 `https://web-two-gamma-49.vercel.app`
* **Findings**: Listed in [Piyush Raj Singh Resume v3](https://docs.google.com/document/d/1tpAG7lbt7QMPCXpPyywE3aIglSRX09_9eq7VIVmpK6U/edit) as *"Experimental App — Personal sandbox for testing full-stack UI patterns & deployment workflows | Next.js · React"*. The slug `web-two-gamma-49` is an unbranded auto-generated Vercel deployment of a `web/` monorepo package.
* **Verdict**: **Archive and remove from Resume/LinkedIn immediately.** Including a generic sandbox slug next to

production systems weakens senior engineering positioning.

3. Full Repository & Deployment Audit Matrix

Project / Repo	Stack	Audit Findings (Features, Bugs, Security)	Action Category
signhify-ai-web.vercel.app (`Warriorlegacy/signhify-ai`)	Next.js, TS, Node.js, MongoDB	7-Agent BYOK Swarm (Nexus, Scribe, Scout, Forge, Herald, Vault, Vision). 4 GitGuardian alerts (MongoDB creds in `08de97f`, `7394a2d`); 3 duplicate Render services (`-v2`, `-v3`).	**Worth Completing** (Delete duplicate Render services, rotate MongoDB password, pin to GitHub).
Signhify 3D Builder (signhify.dpdns.org, `Signhify`, `pixel-perfect-pixel`, `Signhify_Studio`, `Signhify_CLI`)	React/Next.js, TanStack Start, Supabase, Stripe, MCP	Converts 8s video into 360–600 scroll-interpolated 60 FPS frames + MCP server. PR #1 review ([Thread 19f7147109c407e4](https://mail.google.com/mail/u/0/#inbox/19f7147109c407e4)) found mocked `/api/ai/stream` & unauthenticated `/api/marketplace/download`. 14 leaked secrets in `pixel-perfect-pixel`.	**Worth Merging & Rebuilding Backend** (Merge 5 repos into 1; wire real Supabase/Stripe routes; monetize as $1.5K–$4.5K B2B sprint).
vibe-coding-platform-neon-kappa.vercel.app	Next.js, Vercel AI SDK, Sandboxes	Browser text-to-app IDE routing Claude, GPT, and Grok with isolated runtime sandboxes.	**Worth Merging** (Use its Multi-Model AI Gateway & Sandbox as the core runtime of `Signhify` / `OmniGTM`).
autoreels-ai.vercel.app, `Autoshorts`, `autotube`	Next.js, Python, Node, FFmpeg	Prompt-to-video pipeline. `Autoshorts` fails 3x/day (`a88a7ec`); `autotube` fails unit tests (`cfb3c9b`). Heavy duplication with `Autogram`.	**Worth Merging** (Consolidate into `OmniGTM` media engine).
signhify-crm.vercel.app (`Warriorlegacy/CRM`)	Next.js, Postgres, Meta/Google Ads API	Agency CRM & WhatsApp pipeline. 12 GitGuardian incidents (6x Postgres creds, FB App keys); Render `whatsapp-crm-db` expired Aug 12, 2026.	**Worth Merging** (Merge CRM telemetry into `autogtm` on Supabase).
gymflow-saas.vercel.app (`Warriorlegacy/gymflow-saas`)	Next.js, TS, Supabase, Expo, Ollama	Sub-500ms API latency at 200+ concurrent users; 98.7% QR scan accuracy (1.2s); 85.6 SUS score. Keep-alive workflow disabled after 60d inactivity.	**Worth Completing & Monetizing** (Fix Supabase keep-alive; pitch to regional gyms & cite metrics in interviews).
gigmind-gamma.vercel.app	Next.js, TS, Supabase Realtime, Gemini + Groq	12+ category hyperlocal marketplace with Hinglish AI assistant and automatic Gemini -> Groq failover.	**Worth Completing** (Add custom subdomain & rate limiting; strong LLM reliability case study).
tuitiontrack-app.vercel.app (`Warriorlegacy/TuitionTrack`)	Next.js, TS, Supabase, Tailwind	CBSE Class VII–X student/fee management SaaS. 3 GitGuardian JWT/password leaks; keep-alive timing out.	**Worth Completing** (Rotate keys & fix keep-alive).
Sports Exchange (`Sports_Betting_Specifications`, nexusvipexch.vercel.app)	Node/TS, Rust spec, Postgres, Redis, Next.js	Order-matching engine, double-entry ledger, syndicate detection. 10 GitGuardian secret leaks; Render backend OOM crashing (Exit 134).	**Worth Rebuilding / Rebranding** (Strip gambling branding; rebrand as **Open-Source Financial Order-Book & Double-Entry Ledger Engine**).
`ResNet-Chess-Engine` (`singhh-piyush`)	Python, PyTorch, `chess.js`	Residual Neural Network trained via behavioral cloning on 3,400+ human chess games.	**Worth Completing** (Transfer to `Warriorlegacy` to prove deep-learning fundamentals).
`dxfvec`, `signhify-autopilot`, `JMD-Online-Book`, `jarvis-ai-assistant`, `collab-forge`	Python / JS / Next.js	Failing Docker/CI builds (`dxfvec`, `jarvis`), archived (`JMD`), or ATS auto-apply bot (`signhify-autopilot`, 5 CLI secret leaks).	**Worth Archiving / Making Private** (Make `signhify-autopilot` Private immediately; archive the rest).

4. LinkedIn Profile Audit & Verifiable Replacement Package

All copy-paste replacement text for your [LinkedIn profile](https://www.linkedin.com/in/piyushraj-singh) (Headline, About, Featured links, Experience, Projects, and Skills) is documented in full in `CAREER_AND_PORTFOLIO_STRATEGY.md` so you can update your profile in under 15 minutes using strictly verifiable metrics from your shipped projects.

PART 5: PROJECT OPPORTUNITIES & 14-POINT SCORING MATRIX (`PROJECT_OPPORTUNITIES.md`)

SOFTWARE PROJECT OPPORTUNITIES & 14-POINT SCORING MATRIX (2026)
Prepared for: Piyush Raj Singh · **Budget Constraint:** ₹0 / 100% Free & Open-Source Stack

1. Market Research: Where Solo Builders Win at ₹0 in 2026

Across [GitHub](https://github.com/modelcontextprotocol/servers), [Hacker News](https://news.ycombinator.com/item?id=50338728), [Product Hunt](https://www.producthunt.com/products/remotion/alternatives), and [Indie Hackers](https://superframeworks.com/articles/best-micro-saas-ideas-solopreneurs), B2B founders, agencies, and creators are rebelling against **"SaaS Subscription Stacking"**:
- **B2B Outbound & Enrichment Sprawl**: [Clay](https://www.warmly.ai/p/blog/clay-pricing) charges $149–$800/mo with aggressive credit burn, while [Instantly.ai](https://www.landbase.com/blog/instantly-ai-pricing) charges $37.60–$97/mo for Outreach plus $42.30–$197/mo for Leads, pushing total outbound costs to $300–$1,268/mo.
- **Programmatic Video & Social DM Overage Walls**: [Creatomate](https://www.plainlyvideos.com/blog/creatomate-review) charges $54–$329/mo (locking API access out of basic plans), [Submagic](https://www.toolsforhumans.ai/ai-tools/submagic) charges $19–$69/mo, and [ManyChat](https://setsmart.io/blog/manychat-pricing) caps its free tier at 25 contacts before charging per-contact overages.
- **Heavy 3D WebGL Agency Bottlenecks**: Design agencies charge $5,000–$15,000 and take 4–6 weeks to model Three.js/Spline scenes that hurt mobile page speed, whereas your [Signhify 3D Engine](https://signhify.dpdns.org)

converts an existing 8-second MP4 render into a 60 FPS scroll-interpolated website (360–600 frames) in under 3 minutes with zero Three.js runtime bloat.
- **Enterprise MCP Security & Evaluation Gaps**: Following [path-traversal vulnerabilities in community MCP servers](https://thehackernews.com/2026/01/three-flaws-in-anthropic-mcp-git-server.html), AI startups ([Pond AI](https://mail.google.com/mail/?authuser=rajpiyush092@gmail.com#all/thread-f:1880913590851304903), [Mastra](https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980), [Langfuse](https://www.ycombinator.com/companies/langfuse/jobs/1bO16H6-backend-engineer)) pay top-band salaries ($150K–$300K+) to engineers who build **MCP servers with policy guardrails and deterministic evaluation harnesses**.

2. Transparent 14-Criterion Scoring Matrix

Each candidate is scored from **0 to 14** (1 point per criterion) across 14 engineering, monetization, and employability dimensions:

Evaluation Criterion (1.0 Max Each)	**1. OmniGTM & Social Growth OS** (`autoGTM` + `Autogram` + `AutoReels` + MCP)	**2. Signhify 3D Scroll & GenUI Studio** (Productized B2B Micro-SaaS + Agency Engine)	**3. Sovereign ATS & Outbound Career Agent** (`rea_job_engine` + Direct ATS JSON + CDP)	**4. MCP Shield & Agent Eval Harness** (`Vibe Coding` Sandbox + `ecc-tools` Corpus)	**5. DataLightning & K8s Triage Suite** (DuckDB-WASM Text2SQL + K8s Diffs)
1. Real-World Problem & Verified Demand	1.0	1.0	1.0	1.0	0.5
2. Existing Codebase Reuse (>60% Shipped)	1.0	1.0	1.0	0.5	1.0
3. Strict ₹0 Build & Hosting Feasibility	1.0	1.0	1.0	1.0	1.0
4. Time to Usable Production MVP (<14 Days)	1.0	1.0	1.0	0.5	1.0
5. Immediate Revenue Potential (<30 Days)	1.0	1.0	0.5	0.5	0.5
6. High-Ticket / Recurring Pricing Power	1.0	1.0	0.5	1.0	0.5
7. Zero-Budget Customer Acquisition Funnel	1.0	1.0	1.0	0.5	0.5
8. Competitor Price Undercut ($150–$1,200/mo)	1.0	1.0	1.0	1.0	0.5
9. Relevance to $150K–$300K Remote AI Roles	1.0	0.5	1.0	1.0	1.0
10. Full-Stack & Distributed Systems Depth	1.0	1.0	1.0	1.0	1.0
11. Native MCP & Multi-Agent Architecture	1.0	1.0	1.0	1.0	0.5
12. Deterministic Evals, Security & Testing	1.0	0.5	1.0	1.0	1.0
13. Open-Source Virality ("Show HN" Potential)	1.0	1.0	1.0	1.0	0.5
14. Low Maintenance & Policy Compliance	0.5	1.0	0.5	1.0	1.0
TOTAL SCORE (/ 14.0)	**13.5 / 14**	**13.0 / 14**	**12.0 / 14**	**11.0 / 14**	**10.0 / 14**

3. Top Recommendations & Strategic Selection

A. The 3 Strongest Project Candidates
1. **Candidate #1 — OmniGTM: Open-Source Autonomous GTM, Programmatic Video & MCP Agent Platform (13.5/14)**: Merges your fragmented `Warriorlegacy/autogtm`, `Warriorlegacy/Autogram`, `AutoReels AI`, and `Signhify CRM` repositories into a unified monorepo that automates lead discovery, multi-mailbox Brevo/Gmail outbound, Remotion/FFmpeg 60 FPS video rendering, and Instagram/LinkedIn/YouTube publishing—all exposed via an MCP server (`omnigtm-mcp`).
2. **Candidate #2 — Signhify 3D Scroll & Generative UI Studio (13.0/14)**: Upgrades your live [Signhify 3D Engine](https://signhify.dpdns.org) (8-second MP4 -> 360–600 frame 60 FPS scroll-reactive microsites) + [Vibe Coding Platform](https://vibe-coding-platform-neon-kappa.vercel.app) into a turnkey B2B productized service and self-serve agency SaaS.
3. **Candidate #3 — Sovereign ATS Discovery & Proof-of-Work Outbound Engine (12.0/14)**: Productionizes your [AI Job Auto-Apply System Research](https://docs.google.com/document/d/1FI3QEEdK42ytLIb8NLwHPwYJhL0458AVR2NKY9y1e18/edit) (`rea_job_engine.py`) by polling unauthenticated Greenhouse (`boards-api.greenhouse.io`), Lever (`api.lever.co`), and Ashby (`jobs.ashbyhq.com`) JSON feeds, scoring fit with Pydantic structured outputs, and dispatching custom demo links to hiring managers. *(Note: Keep the DOM auto-apply script private while open-sourcing the ATS JSON discovery & evaluation engine as part of OmniGTM).*

B. Selected Flagship Portfolio Project (Maximum Hiring & Open-Source Signal)
* **Flagship Selection**: **`OmniGTM` (`Warriorlegacy/omnigtm`)**
* **Why This Wins Interviews**: Hiring managers at [Pond AI](https://mail.google.com/mail/u/0/#inbox/1a1a58f203e57dc7), [Mastra](https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980), [Radar Labs](https://radar.com/jobs#jobs), [Opsfleet](https://www.linkedin.com/jobs/view/4478769287/), and [Langfuse](https://www.ycombinator.com/companies/langfuse/jobs/1bO16H6-backend-engineer) look for four things that 95% of junior AI portfolios lack:
  1. **Multi-Provider LLM Resiliency**: Automatic failover across Gemini -> Groq -> OpenRouter `:free` -> Ollama with token-cost accounting.
  2. **Deterministic RAG & Agent Evals**: Built-in golden dataset (`evaluator-rag-corpus.ts`) measuring hallucination rate, citation groundedness, and schema compliance on every PR.
  3. **Model Context Protocol (MCP) Server with Policy Guardrails**: Declarative `allow` / `deny` / `ask_user` hooks preventing unauthorized outbound sends or path traversal.
  4. **Production Full-Stack & Async Media Engineering**: Next.js 15 + FastAPI + Supabase RLS + headless Remotion/FFmpeg video pipelines running on zero-cost CI/CD.
* **Complete Flagship Documentation Package**: Delivered in `/flagship_omnigtm_docs/` (`PRD.md`, `TRD.md`, `ARCHITECTURE.md`, `DATABASE_SCHEMA.md`, `API_SPECIFICATION.md`, `DEVELOPMENT_GUIDE.md`, `DEPLOYMENT_GUIDE.md`, `TESTING_STRATEGY.md`, `MONETIZATION_STRATEGY.md`, `FUTURE_ROADMAP.md`) and compiled into your complete PRD & TRD PDF and Word deliverables.

C. Selected Fastest-Revenue Product (Immediate Cash Flow in 7–21 Days)

* **Fast-Cash Selection**: **Signhify "60 FPS 3D Scroll Launchpad + Grounded AI Concierge" 7-Day Sprint**
* **Why This Generates Cash Fastest**: Pure B2B SaaS takes months of SEO to compound from $29/mo subscriptions. By contrast, using `OmniGTM` to send a **pre-rendered 60 FPS 3D scroll preview** (`signhify.dpdns.org/preview/{prospect}`) built from a prospect's own 8-second video allows you to close **$1,500 (48-hour hero component)** to **$3,500–$4,500 (7-day launch microsite + AI concierge)** deals with architectural CGI studios, Webflow/Framer agencies, and newly funded startups—requiring only **1–2 closed deals to generate ₹1.25L–₹3.75L ($1,500–$4,500)** while transitions to a **$149–$299/mo hosting and AI maintenance retainer**.

PART 6: HIGH-PAYING REMOTE JOB & LINKEDIN OPTIMIZATION STRATEGY (`CAREER_AND_PORTFOLIO_STRATEGY.md`)

HIGH-PAYING REMOTE JOB & PORTFOLIO STRATEGY (2026)
Candidate: Piyush Raj Singh · **Location:** Uttar Pradesh / New Delhi, India (IST, UTC+5:30)
Target Roles: Full-Stack AI Engineer · Agentic Systems / MCP Engineer · Founding Full-Stack Engineer (Next.js / Python / TypeScript)

1. Verifiable 2026 Remote Compensation Bands (Hiring from India)

Grounded in the [AY Automate 2026 AI Engineer Salary Guide](https://www.ayautomate.com/blog/ai-engineer-salary-guide-2026), [ReachRole 2026 Remote Guide](https://reachrole.app/blog/best-remote-job-sites-for-indian-developers), and active Ashby/Greenhouse/YC postings in your [Workspace Tracker](https://docs.google.com/spreadsheets/d/1ogy9-w1OHF3J26M_Da2Tj_nHvq7uy2HlfDRkxZOjc4s/edit):

Employer Category	Target Role Level	Verifiable Annual Comp (USD / INR)	Live Examples from Your Pipeline	Legal & Tax Setup in India (₹0 Setup)
Tier 1: US/Global Remote AI Startups (Async B2B Contract / EOR)	Founding / Mid-Senior AI & Full-Stack Engineer	**$120,000 – $250,000/yr** ($10K–$20.8K/mo USD)	[Pond AI](https://news.ycombinator.com/item?id=50338728) ($160K–$240K), [Radar Labs](https://radar.com/jobs#jobs) ($150K–$220K), [Mastra](https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980) ($140K–$200K), [Exa](https://exa.ai/careers) ($150K–$250K), [Infisical](https://infisical.com/careers/senior-full-stack-engineer) ($180K–$250K)	Independent B2B Contractor via Deel / Wise / Mulya using **Section 44ADA** (presumptive taxation on 50% of gross receipts up to ₹75L) + **GST LUT** (0% IGST on software exports).
Tier 2: EU / Global Scaleups & Remote-First Teams	Full-Stack / Applied AI Engineer	**$75,000 – $150,000/yr** (€70K–€140K/yr)	[Opsfleet](https://www.linkedin.com/jobs/view/4478769287/) ($90K–$150K), [ThreatMark](https://www.threatmark.com/careers/) ($85K–$140K), [Scento](https://www.scento.com/careers) (€125K–€185K), [Deel](https://www.deel.com/careers/job/3fba28af-9e22-4cbf-b902-b8328e7c3e66/) ($60K–$130K)	Direct B2B USD/EUR invoice or Deel / Remote.com India EOR payroll.
Tier 3: YC India-Remote & Global Capability Centers (GCCs)	Applied AI / Founding Engineer	**$40,000 – $95,000/yr** (₹33L–₹80L/yr + Equity)	[FurtherAI](https://www.ycombinator.com/companies/furtherai/jobs) ($40K–$80K + 0.1–0.8% equity), [Dscout India Remote](https://www.remoterocketship.com/company/dscout-2/jobs/applied-ai-engineer-india-remote/), [YipitData India](https://job-boards.greenhouse.io/yipitdata/jobs/8327847), [Synthio Labs](https://builtin.com/job/ai-engineer/11176775)	Direct India payroll or retainer.

2. Immediate Action: Submit Your 12 Researched Pending Applications

You have already sent 14 applications (including **AIOS**, **Pond AI**, **Radar Labs**, **Kanurra**, **Opsfleet**, **ThreatMark**, **Scento**, **Stream**, **Charge Robotics**, **LiveKit**, **Supabase**, **Sticker Mule**, **Dscout**, and **FurtherAI**). Complete and submit these **12 pending high-match portal applications** immediately after applying the portfolio URL redirect (`piyush-portfolio-ebon.vercel.app` -> `signhify.dpdns.org`):

1. **[Mastra — Senior Software Engineer (TypeScript AI Agent Framework)](https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980)** ($140K–$200K) — Lead with `Signhify AI` (7-agent TypeScript swarm) and `OmniGTM` MCP server.
2. **[Exa — Forward Deployed Engineer (Remote India)](https://exa.ai/careers)** ($150K–$250K) — Lead with `autoGTM` search/enrichment pipelines and RAG evaluation corpus.
3. **[Infisical — Senior Full-Stack Engineer (Open-Source TypeScript/Node/Postgres)](https://infisical.com/careers/senior-full-stack-engineer)** ($180K–$250K) — Lead with `Signhify` secret-vault architecture and open-source TypeScript monorepo.
4. **[YipitData — Senior Software Engineer (Remote India, 8am–5pm IST)](https://job-boards.greenhouse.io/yipitdata/jobs/8327847)** — Lead with Python/FastAPI data pipelines and OCI GenAI certification.
5. **[Synthio Labs — AI Engineer (YC-Backed, Remote India)](https://builtin.com/job/ai-engineer/11176775)** — Lead with multimodal voice/video synthesis (`AutoReels AI` + `GigMind` Gemini/Groq router).
6. **[Langfuse — Backend Engineer (Open-Source LLM Observability)](https://www.ycombinator.com/companies/langfuse/jobs/1bO16H6-backend-engineer)** — Lead with `OmniGTM`'s Multi-Model AI Gateway and deterministic LLM evaluation harness.
7. **[Deel — AI Engineer (Python/Node/TypeScript, Remote India)](https://www.deel.com/careers/job/3fba28af-9e22-4cbf-b902-b8328e7c3e66/)** ($60K–$130K) — Lead with production multi-tenant SaaS (`GymFlow`, `Signhify CRM`).
8. **[Keywords Studios — AI Full-Stack Developer (Remote India)](https://apply.workable.com/keywords-intl1/j/7F35507BA0)** — Lead with `Vibe Coding Platform` and 60 FPS 3D WebGL engineering.
9. **[CrowdStrike — AI Engineer (Remote India)](https://builtin.com/job/ai-engineer-remote-ind/9732081)** — Lead with OCI GenAI Professional credential and MCP policy guardrails.
10. **[Stream — Senior Full-Stack / AI Moderation Engineer (Ashby Portal)](https://jobs.ashbyhq.com/stream)** — Submit formal Ashby portal entry to pair with your Nov 4 email to `pauli.ojala@getstream.io`.
11. **[Charge Robotics — Software & AI Engineer (Ashby Portal)](https://jobs.ashbyhq.com/charge-robotics)** — Submit

formal Ashby portal entry to pair with your Nov 4 email to `max@chargerobotics.com`.
12. **[Radar Labs — Full-Stack AI & MCP Engineer (Portal Entry)](https://radar.com/jobs#jobs)** — Submit formal portal entry to pair with your Nov 4 email to `tim@radar.com`.

3. Copy-Paste LinkedIn Profile Optimization Package (`linkedin.com/in/piyushraj-singh`)

Use only verifiable facts and metrics from your shipped repositories and [Resume v3](https://docs.google.com/document/d/1tpAG7lbt7QMPCXpPyywE3aIglSRX09_9eq7VIVmpK6U/edit):

A. Optimized Headline (216 Characters)
> **Full-Stack AI Engineer & Founder @ Signhify Studio | Building Multi-Agent LLM Systems, Next.js/TypeScript SaaS & Autonomous GTM Pipelines | Python, React, Node.js, Supabase, PyTorch**

B. Optimized About Section
> I am a Full-Stack AI Engineer and Technical Founder who builds and ships production-grade AI systems, multi-agent workflows, and scalable SaaS platforms from zero to one.
>
> Over the past year as Founder & Lead Developer at Signhify Studio, I have architected and deployed 13+ full-stack web applications, autonomous AI pipelines, and revenue-generating client platforms across Next.js, TypeScript, Python, Node.js, and Supabase/PostgreSQL:
>
> • **Multi-Agent & LLM Orchestration**: Built Signhify AI (a 7-agent BYOK workspace orchestrating Nexus, Scribe, Scout, Forge, Herald, Vault, and Vision agents), a browser-based Vibe Coding IDE integrating Claude, GPT, and Grok via a unified Multi-Model AI Gateway, and an MCP Server for autonomous code and web generation.
> • **High-Performance Web & Media Engineering**: Engineered Signhify's flagship AI 3D Website Builder that extracts 360–600 frames from an 8-second video clip and interpolates them on scroll to deliver 60 FPS 3D web experiences, alongside AutoReels AI and AutoGTM for automated multimodal content and outbound GTM workflows.
> • **Production SaaS & Real-Time Systems**: Architected GymFlow (a multi-tenant fitness SaaS + Expo React Native app sustaining sub-500ms API latency across 200+ concurrent users with 98.7% QR scan accuracy), GigMind (a 12+ category hyperlocal marketplace with Hinglish AI chat and Gemini-to-Groq fallback routing), and TuitionTrack.
> • **Deep Learning & Enterprise Cloud**: Oracle Cloud Infrastructure (OCI) 2025 Certified Generative AI Professional; designed and trained a custom Residual Neural Network (ResNet) chess engine in PyTorch using behavioral cloning across 3,400+ games.
>
> **Core Stack**: TypeScript, JavaScript (ES6+), Python, SQL, Next.js, React.js, Node.js, Express, FastAPI, PyTorch, LangChain, Vercel AI SDK, Model Context Protocol (MCP), Supabase, PostgreSQL, Redis, Docker, GitHub Actions CI/CD, Cloudflare, and Vercel.
>
> Open to Founding Engineer, Full-Stack AI Engineer, and Agentic Systems roles worldwide (Remote / Async-First). Reach me at rajpiyush092@gmail.com.

C. Featured Section (5 Pinned Proof-of-Work Cards)
1. **Signhify AI — 7-Agent Autonomous Swarm**: `https://signhify-ai-web.vercel.app`
2. **Signhify Studio — 60 FPS AI 3D Website Builder & MCP Server**: `https://signhify.dpdns.org`
3. **Signhify AutoGTM — Autonomous Outbound & Conversion Engine**: `https://autogtm-web.vercel.app`
4. **Vibe Coding Platform — Multi-Model LLM Text-to-App Sandbox**: `https://vibe-coding-platform-neon-kappa.vercel.app`
5. **GymFlow SaaS — Multi-Tenant Fitness Platform (Sub-500ms Latency)**: `https://gymflow-saas.vercel.app`

D. Experience & Project Descriptions
* **Founder & Lead Full-Stack AI Engineer | Signhify Studio (Jan 2026 — Present | Remote)**:
  - Architected the Signhify AI 3D Website Builder (`signhify.dpdns.org`), converting 8-second video clips into 360–600 scroll-interpolated frames rendering at 60 FPS with one-click ZIP export and a Model Context Protocol (MCP) Server.
  - Built Signhify AI (`signhify-ai-web.vercel.app`), a Bring-Your-Own-Key (BYOK) multi-agent workspace coordinating 7 autonomous agents (Nexus, Scribe, Scout, Forge, Herald, Vault, Vision) with persistent vector memory and multi-channel webhooks.
  - Engineered AutoGTM (`autogtm-web.vercel.app`), an automated outbound GTM platform featuring least-sent multi-mailbox load balancing, Brevo SMTP failover (300/day free relay), automated Playwright buyer-walkthrough E2E tests, and a 43-page SEO-verified web app.
  - Shipped Vibe Coding Platform (`vibe-coding-platform-neon-kappa.vercel.app`), AutoReels AI (`autoreels-ai.vercel.app`), and Signhify CRM (`signhify-crm.vercel.app`), plus 5+ production client platforms (`rahul-silk-saree-website.vercel.app`, `gplesports.vercel.app`, `sewarthpathsansthanam`).
* **Customer Experience & Operations Executive | Yescom India Softech Pvt. Ltd (Apr 2025 — Jul 2025 | Patna, India)**
* **Software Engineering Trainee | HCLTech (Feb 2023 — Apr 2023 | Remote)**

4. Repeatable Daily 2-Hour Job & Client Acquisition Routine

1. **08:30–09:00 IST — Automated ATS JSON Discovery**: GitHub Actions polls `boards-api.greenhouse.io`, `api.lever.co`, and `jobs.ashbyhq.com` for roles matching `("AI Engineer" OR "Full-Stack" OR "Founding Engineer" OR "MCP") AND ("Remote" OR "Anywhere")` and scores them against your resume using Pydantic structured outputs.
2. **09:00–09:45 IST — 5 Clean-Room ATS Portal Submissions**: Use your local loopback CDP (`127.0.0.1:9222`) + Playwright autofill helper to submit 5 high-scoring roles with human verification on every final click.
3. **09:45–10:30 IST — The "1-Week Paid Trial Sprint" Founder Pitch**: Email the CTO/Founder directly via `autoGTM` with a 60-second custom demo or 60 FPS scroll preview (`signhify.dpdns.org/preview/{company}`), offering to complete a

scoped 1-week paid engineering sprint ($1,500) on their hardest backlog item before they commit to a full-time hire.

PART 7: AUTOMATED GTM ENGINE STRATEGY (`GTM_AUTOMATION_STRATEGY.md`)

AUTOMATED GO-TO-MARKET (GTM) ENGINE STRATEGY FOR SIGNHIFY STUDIO
Platform: `OmniGTM` (Upgraded from `Warriorlegacy/autogtm` + `Warriorlegacy/Autogram` + `AutoReels AI`) · **Operating Cost:** ₹0

1. Modular 5-Stage GTM Architecture (DISCOVERY -> CONTENT -> DISTRIBUTION -> LEAD -> REVENUE)

Instead of running disconnected scripts, `OmniGTM` unifies your outbound B2B client acquisition and inbound social content engine into five modular microservices running on **GitHub Actions + Cloudflare Pages/Workers + Supabase/Neon Postgres + Brevo FreeRelay**:

[1. Signal & Pain-Point Harvester] ──> (Ashby/Greenhouse JSON, HN Who's Hiring, Reddit, Product Hunt, Agency Directories) │ ▼ [2. Multi-Model ICP & Angle Engine] ──> (Gemini 2.5/3.8 Flash → Groq → OpenRouter :free + Voice Card Register Matching) │ ┌──┐ ▼ ▼ [3A. Inbound Multimodal Content Factory] [3B. Outbound Proof-of-Work Factory] • Remotion + Manim + FFmpeg 60 FPS Reels • Automated 8s Video → 60 FPS 3D Preview • Kokoro-82M TTS + Whisper.cpp Captions • Custom MCP / RAG Sandbox Link Generation • LinkedIn SVG/PDF Carousel Generator • Least-Sent Mailbox + Brevo (300/day) Relay │ │ ▼ ▼ [4A. Official API Distribution] [4B. Automated Follow-Up & Reply Classifier] • Instagram Graph API (100/24h + Auto-DM) • Day 0 Observation Email + Live Demo URL • LinkedIn Posts API (150/day) • Day 3 Architecture / Loom Follow-Up • YouTube Data API v3 (100 uploads/day) • Day 7 Zero-Pressure Breakup Email │ │ └──┘ ▼ [5. Unified Conversion & Revenue Funnel (Supabase CRM)] • Cal.com Discovery Booking → 50% Upfront Deposit (`paypal.me/signhify` / Wise) • 7-Business-Day Sprint Delivery → $149–$299/mo Hosting & AI Retainer

2. Audience-Specific Content & Outbound Matrix

Never publish identical generic material across channels. Route every topic through four distinct ICP registers defined in your [Voice Card](https://docs.google.com/document/d/1gzYDZIYubUk7RuUyxv38Fn4Tj5ymEoJrr708SxMHxUo/edit):

Target Product / Brand	Primary Audience (ICP)	Core Pain Point Addressed	Inbound Content Format (IG / LinkedIn / YT)	Outbound Wedge (`autoGTM` Cold Email)
Signhify Studio (signhify.dpdns.org)	CGI ArchViz Studios, Webflow/Framer Agencies, Seed/Series A Startups	Static websites fail to convert; custom Three.js WebGL costs $10K+ and tanks mobile Lighthouse scores.	**Before/After 60 FPS Scroll Reels**: Show an 8s MP4 render transformed into an interactive 60 FPS scroll microsite in 90 seconds.	Send a live, pre-rendered 60 FPS preview built from a video on the prospect's own homepage (`signhify.dpdns.org/preview/{slug}`).
OmniGTM / autoGTM (autogtm-web.vercel.app)	Solo Founders, Indie Hackers, B2B Agencies	Paying $400–$1,200/mo for stacked [Clay](https://www.warmly.ai/p/blog/clay-pricing) + [Instantly](https://www.landbase.com/blog/instantly-ai-pricing) + [ManyChat](https://setsmart.io/blog/manychat-pricing) subscriptions.	**Contrarian Cost-Breakdown Carousels & Reels**: *"Stop paying $500/mo for outbound SaaS. Run this open-source MCP stack on GitHub Actions for $0."*	Offer a 14-day pilot installing a private, zero-subscription outbound & CRM pipeline on the agency's own domain.
Signhify AI & Vibe Coding (signhify-ai-web.vercel.app)	CTOs, VP Engineering, AI Startup Founders	Fragile single-model wrappers, lack of MCP tool security, and zero evaluation benchmarks.	**Architectural Deep-Dives (YouTube + LinkedIn)**: 7-agent swarm orchestration, Gemini-to-Groq latency failover, and RAG eval harnesses.	Pitch a **$1,500 1-Week Engineering Trial Sprint** to ship their custom MCP server, RAG pipeline, or evaluation suite.
GymFlow SaaS (gymflow-saas.vercel.app)	Independent Gym Owners & Fitness Studios	Manual WhatsApp fee reminders and slow front-desk check-ins.	**15s Operational Demo Reels**: 1.2-second QR check-in + automated WhatsApp renewal reminder.	Direct WhatsApp/Email invite for a free 14-day gym onboarding pilot (converts to ₹1,999/mo or $49/mo).

3. Legitimate API Publishing & Compliance Safeguards (Verified Nov 2026)

Platform	Official Free API & Endpoint	Verified Free Quota (Nov 2026)	Authentication & Token Lifecycle	Compliance & Fallback Safeguard
Instagram (Reels, Carousels, Stories, Auto-DM)	[Instagram Graph API](https://developers.facebook.com/documentation/instagram-platform/content-publishing) (`/{ig-user-id}/media` -> `/{ig-user-id}/media_publish` + Private Replies API)	**100 API-published posts per 24-hour moving window**; Private Replies within 7 days of user comment.	Instagram Professional (Business/Creator) account + 60-day long-lived token (auto-refreshed on Day 50 via GitHub Actions).	Stage MP4/JPEG assets on [Neon Object Storage](https://neon.com/docs/introduction/plans) or [Supabase Storage](https://supabase.com/pricing) with public HTTPS URLs so Meta's cURL fetcher never fails.
LinkedIn (Text, Images, Native PDF Carousels, Video)	[LinkedIn Posts API]

(https://www.outstand.so/blog/linkedin-posts-api) (`POST https://api.linkedin.com/rest/posts`, `/rest/images`, `/rest/documents`) | **150 requests/day per member** (`w_member_social`), 100/day per Company Page. | 60-day OAuth 2.0 access token; always pass current `LinkedIn-Version: 202610` (`YYYYMM`) header. | Multi-page PDF documents uploaded via `/rest/documents` render natively as swipeable LinkedIn carousels. |
YouTube (Long-Form 16:9 & Shorts 9:16)	[YouTube Data API v3] (https://developers.google.com/youtube/data/determine_quota_cost) (`POST /upload/youtube/v3/videos?uploadType=resumable`)	**100 `videos.insert` uploads/day dedicated bucket** (updated June 1, 2026) + 10,000 general units/day.	Google Cloud OAuth 2.0 refresh token (`--refresh-token`). Set `status.containsSyntheticMedia: true`.	Until your Google Cloud project passes the free [API Compliance Audit] (https://developers.google.com/youtube/data/guides/quota_and_compliance_audits), uploads default to `private`—review and flip to `public` in 1 click inside YouTube Studio.
X (Twitter) & Reddit	**Ready-to-Publish Queue Fallback** (X removed its Free API tier in [Feb 2026] (https://postproxy.dev/blog/x-api-pricing-2026/))	₹0 via One-Click Web Intent Queue in `OmniGTM` Dashboard.	Zero API keys required.	Never use unauthorized browser-cookie scrapers that risk account bans; generate pre-formatted threads with 1-click `https://x.com/intent/tweet?text=...` deep links in your dashboard.
Cold Email Outbound	`OmniGTM` FreeRelay ([Brevo SMTP](https://datalaria.com/en/posts/hidden_economics_ai/) + Multi-Mailbox Gmail OAuth)	**300 free emails/day** (9,000/mo) via Brevo + 40/day per Gmail mailbox.	SPF, DKIM, and DMARC (`p=quarantine`) verified; strict `List-Unsubscribe` header and `"Reply STOP"` footer.	Hard cap at 35 cold emails/day per Gmail inbox and 150/day on Brevo with >60% personalized observation tokens to maintain >98% primary inbox placement.

4. End-to-End Funnel Telemetry & Attribution (₹0 Stack)

Track every touchpoint in your Supabase `gtm_telemetry` schema without paid analytics tools:
1. **UTM & Shortlink Attribution**: Every link in an Instagram Reel DM, LinkedIn Carousel, YouTube description, or cold email carries `?utm_source={channel}&utm_campaign={topic_slug}&utm_content={variant_id}` routed through a Cloudflare Worker redirector that logs clicks to Supabase.
2. **Conversion Milestones Tracked**: `impression -> profile_visit -> comment_keyword ("FOSS") -> dm_delivered -> preview_clicked -> cal_booked -> deposit_paid -> mr_retained`.
3. **Automated Weekly Pruning**: Every Sunday at `00:00 UTC`, a GitHub Action calculates the **Hook Retention Rate** and **Click-to-Lead Conversion Rate** of the week's content pillars and feeds the top 20% performing hooks back into the prompt context for the following week's script generation.

PART 8: INSTAGRAM & SOCIAL MEDIA GROWTH AUTOPILOT (`SOCIAL_MEDIA_GROWTH_STRATEGY.md`)

INSTAGRAM & SOCIAL MEDIA GROWTH STRATEGY ON AUTOPILOT
Brand: Signhify Studio (`@signhify.studio` / signhify.dpdns.org) · **Budget:** ₹0

1. Brand Positioning & Visual Identity

Your existing Instagram reels ([n8n $0 Workflow Breakdown](https://www.instagram.com/p/DdgVCwpGOQe/), [NocoDB vs Airtable Architecture](https://www.instagram.com/_t/reel/Dejr50JiQw9/), [Contrarian FOSS vs SaaS FinOps] (https://www.instagram.com/p/DdNw6gHFoEY/)) already establish a clear, high-converting voice:
- **Core Tagline**: *"My name is Piyush Raj Singh. Stop posting. Start shipping."*
- **Visual Signature**: Dark-mode engineering aesthetic (`#090D16` obsidian background, `#38BDF8` cyan architecture lines, `#10B981` emerald cost-savings badges, `#F43F5E` rose SaaS burn alerts, crisp `JetBrains Mono` terminal code blocks, and smooth 60 FPS spring physics).
- **Primary Conversion Mechanic**: **Comment-to-DM Keyword Funnel** (*"Comment `FOSS` or `3D` below and I'll DM you the full GitHub repo + `docker-compose.yml` blueprint"*).

2. The 4 Content Pillars for Signhify Studio

Pillar	Weight	Target Outcome	Format & Visual Execution	CTA Keyword
Pillar 1: Zero-Burn FOSS Replacements (*"Stop paying $X/mo for Y"*)	35%	Viral reach, saves, and follower growth among developers & founders	**60 FPS Remotion Reel + 7-Slide Carousel**: Compare bloated SaaS ($200/mo Airtable, $500/mo Clay, $99/mo Zapier) against self-hosted FOSS (NocoDB, OmniGTM, Activepieces/n8n) with a live 60-second `docker compose up -d` terminal animation.	`Comment "FOSS"` -> Auto-DM GitHub starter kit + link to Signhify Studio.
Pillar 2: 60 FPS 3D Web & Generative UI Breakdowns	25%	Inbound B2B agency & startup clients ($1,500–$4,500 sprints)	**Split-Screen Motion Reel**: Top half shows a raw 8s CGI/product MP4; bottom half shows the live 60 FPS scroll-interpolated website generated by [Signhify 3D Engine](https://signhify.dpdns.org) with Lighthouse `99/100` performance metrics.	`Comment "3D"` -> Auto-DM live interactive demo link + 7-day sprint booking link.
Pillar 3: Production AI & Multi-Agent Architecture	25%	Inbound CTOs, Engineering Managers & $150K+ remote job interviews	**Manim + Remotion System Diagram Reel**: Animate how your 7-agent swarm (`Signhify AI`), Gemini-to-Groq failover router (`GigMind`), or MCP security policy layer works under the hood with real latency numbers (`<420ms`).	`Comment "ARCH"` -> Auto-DM link to `Warriorlegacy/omnigtm` repo & architecture PDF.
Pillar 4: Contrarian Builder Economics & FinOps	15%	High comment velocity & LinkedIn executive shares	**Data-Driven Contrarian Carousel/Reel**: When self-hosting actually costs more in engineering hours than serverless free tiers (Cloudflare Workers + Neon + Supabase).	`Comment "STACK"` -> Auto-DM the verified Nov 2026 Zero-Budget Tech Stack sheet.

3. Programmatic Motion Graphics & Animated Reels Pipeline (₹0 Stack)

To ensure your Reels look like top-tier technology motion graphics (Fireship / Linear / Vercel launch style) rather than low-effort AI slideshows, `OmniGTM` uses a **100% code-driven rendering pipeline** running inside public GitHub Actions (`ubuntu-latest`, 4 vCPU, 16 GB RAM, unlimited free minutes):

1. **Topic & Hook Synthesis (`Gemini 2.5 Flash` + `Groq`)**:
   - Pulls trending repos from GitHub Trending, Hacker News, and your `topic_history` table in Supabase (replacing the broken git-commit state in `Warriorlegacy/Autogram`).
   - Enforces a **Virality Gate Rubric (minimum 85/100)** checking: (a) Concrete dollar or latency number in the first 2.5 seconds, (b) Contrarian comparison, (c) Zero fluff words.
2. **Neural Voiceover Synthesis (`Kokoro-82M` — Apache-2.0, CPU-Native)**:
   - Synthesizes crisp, natural technical narration at 24kHz WAV in `<4 seconds` on CPU with zero API fees and full commercial rights.
3. **Word-Level Dynamic Timestamping (`Whisper.cpp` — MIT)**:
   - Runs `whisper-cli -m models/ggml-base.en.bin -f voiceover.wav --max-len 1 -dtw base.en -oj` to extract millisecond-accurate word timestamps (`captions.json`).
4. **60 FPS Motion Graphics Rendering (`Remotion` + `Manim` + `Playwright`)**:
   - **Scene 1 (0–3s — The Hook)**: High-contrast spring-animated cost comparison badge + audio riser.
   - **Scene 2 (3–18s — The Architecture Graph)**: SVG node-and-edge data-flow diagram where request packets animate along bezier curves synchronized to the voiceover timestamps.
   - **Scene 3 (18–38s — Live Code / Terminal Proof)**: Syntax-highlighted `docker-compose.yml` or TypeScript MCP code typing out at 60 FPS alongside a Playwright-captured live UI preview.
   - **Scene 4 (38–50s — Benchmarks & CTA)**: Animated bar chart comparing latency/cost + `"Comment FOSS for the GitHub Repo"` callout.
   - Starter template implemented in: `/omnigtm_starter_code/RemotionArchitectureReel.tsx`.
5. **Automated Publishing & Comment-to-DM Loop (`Instagram Graph API` + `LinkedIn Posts API`)**:
   - Publishes the MP4 Reel and 7-slide PDF/image carousel via official Graph/REST APIs.
   - Polls `GET /{ig-media-id}/comments` (or listens via Cloudflare Worker webhook) for keywords (`FOSS`, `3D`, `ARCH`, `STACK`) and dispatches an instant Private Reply DM containing the GitHub repo link and a soft CTA for Signhify Studio.

4. 30-Day Execution Content Calendar (Ready-to-Run)

Days	Topic & Hook (First 3 Seconds)	Visual Template (`RemotionArchitectureReel.tsx`)	Target Channel	Auto-DM Lead Magnet
Days 1–5	1. *"Clay + Instantly costs $600/mo. Here's our $0 MCP outbound stack."* 2. *"How we render 60 FPS 3D websites from an 8s MP4 with zero Three.js."* 3. *"Stop paying $59/mo for Zapier: Self-hosted Activepieces vs n8n in 2026."* 4. *"Inside our 420ms Gemini-to-Groq LLM failover router in TypeScript."* 5. *"Why 90% of AI wrappers fail technical interviews (and how to add Ragas evals)."*	• Node Graph + Cost Comparison • Split-Screen 8s Video -> 60 FPS Scroll • Docker Compose Terminal Typing • Latency Failover Waterfall • CI/CD Evaluation Gate	IG Reels + LinkedIn Carousel + YT Shorts	`Warriorlegacy/omnigtm` repo + `signhify.dpdns.org` preview tool
Days 6–10	6. *"Replace $200/mo Airtable with NocoDB + Supabase in 60 seconds."* 7. *"How we built a 7-Agent BYOK Swarm with persistent vector memory."* 8. *"3 security flaws in community MCP servers—and how to sandbox them."* 9. *"How a 1.2-second QR scanner cut gym check-in latency by 75% (GymFlow case study)."* 10. *"Stop using Vercel Hobby for commercial SaaS—migrate to Cloudflare Workers Free."*	• Architecture Breakdown • 7-Agent Swarm Topology • Security Policy Hook Diagram • Mobile + SaaS Benchmark • Cloud Free-Tier Comparison	IG Reels + LinkedIn Carousel + YT Shorts	Architecture blueprints + 7-day B2B Sprint Audit offer
Days 11–20	Days 11–20 rotate through **10 deep-dive comparisons**: (11) Creatomate vs Remotion+GH Actions; (12) ManyChat vs IG Graph API Private Replies; (13) Greenhouse/Ashby JSON API architecture; (14) Supabase 7-day pause fix; (15) Kokoro-82M vs ElevenLabs ($0 vs $99/mo); (16) Real estate CGI -> 60 FPS scroll microsite; (17) Hinglish AI marketplace routing (`GigMind`); (18) Double-entry ledger design in PostgreSQL; (19) PyTorch ResNet behavioral cloning; (20) Local Ollama vs Free Cloud APIs.	Alternates across the 4 modular Remotion scenes (`HookCard`, `ArchitectureGraph`, `TerminalProof`, `BenchmarkCTA`)	IG Reels + LinkedIn + YT Shorts	Direct links to your 6 pinned GitHub repos & live Vercel/CF demos
Days 21–30	Days 21–30 publish **10 live build-in-public case studies** showcasing real outreach conversion metrics from `OmniGTM`, live 3D microsite client transformations, and open-source benchmark releases.	Live Screen Capture + Animated Telemetry Overlay	IG Reels + LinkedIn + YT Shorts	Free 60 FPS 3D Hero Prototype for qualified B2B leads

PART 9: YOUTUBE AUTOMATION & YPP MONETIZATION STRATEGY (`YOUTUBE_AUTOMATION_STRATEGY.md`)

YOUTUBE AUTOMATION & MONETIZATION STRATEGY (2026)
Channel Brand: Signhify Studio — AI Engineering, Open-Source Systems & Zero-Budget SaaS
Operating Cost: ₹0 · **Compliance Standard:** 100% YouTube Partner Program (YPP) Safe

1. 2026 YouTube Partner Program (YPP) & AI Policy Realities

Before automating a single upload, your pipeline must be engineered around two verified November 2026 YouTube policies:

1. **Two-Tier YPP Thresholds ([Official YouTube Help](https://support.google.com/youtube/answer/72851?hl=en))**:
   - **Tier 1 (Early Access — Fan Funding, Super Thanks, Memberships)**: **500 subscribers** + 3 public uploads in the last 90 days + either **3,000 valid public watch hours** (12 months) OR **3,000,000 valid public Shorts views** (90 days).

```
   - **Tier 2 (Full Ad Revenue Sharing — AdSense)**: **1,000 subscribers** + either **4,000 valid public long-form
watch hours** (12 months) OR **10,000,000 valid public Shorts views** (90 days).
   - *Strategic Takeaway*: **4,000 long-form watch hours is 10x easier to hit for a technical channel** than 10M Shorts
views—just 24,000 total views across 8–10 minute architectural tutorials with 10 minutes of average watch time unlocks
full AdSense monetization, while B2B sponsorships and client leads convert from your very first 500 views.
2. **July 2025 / 2026 "Inauthentic Content" & Synthetic Disclosure Rules ([Official Policy]
(https://support.google.com/youtube/answer/1311392?hl=en) & [Synthetic Media Rules]
(https://support.google.com/youtube/answer/14328491?hl=en))**:
   - YouTube explicitly demonetizes mass-produced, templated slideshow videos that read scraped Wikipedia/Reddit text
over stock footage.
   - YouTube **explicitly permits and monetizes AI-assisted educational and technical channels** when the videos
feature original scripts, bespoke code/architecture animations (Remotion + Manim), real terminal/application recordings
(Playwright), and clear analytical value.
   - Always pass `"status": {"containsSyntheticMedia": true}` in your `videos.insert` payload when realistic synthetic
media is used.

## 2. End-to-End Automated Long-Form Video Production Pipeline (8–12 Minute Deep Dives)

Every week, `OmniGTM` produces **2 Long-Form Architectural Deep-Dives (8–12 mins, 1920x1080, 60 FPS)** and repurposes
each into **3–4 Native YouTube Shorts (9:16)** at ₹0 cost:
```

[1. Research & Competitor Gap Harvester] • Queries YouTube Data API v3 (`search.list`, 100 calls/day bucket) + HN + GitHub Trending • Identifies high-search, low-supply queries (e.g., "MCP Server Security TypeScript", "Self-Host n8n vs Activepieces 2026", "Gemini 2.5 Flash vs Groq Fallback Router") | ▼ [2. Structured Storyboard & Script Engine (`storyboards/*.json`)] • Gemini 2.5/3.8 Flash generates a 1,600-word technical script divided into 6 chapters: (00:00) The Expensive Problem & Live Demo Proof (01:15) Architectural Topology & Data Flow (03:00) Step-by-Step Code & Config Walkthrough (06:00) Live Load / Latency / Cost Benchmark Comparison (08:00) Edge Cases, Security Traps & How to Fix Them (09:30) Open-Source Repo Handoff & Next Steps | ▼ [3. Audio & Timing Layer (CPU-Native in GitHub Actions)] • Kokoro-82M (Apache-2.0) generates chapter WAV files (or optional 60-second human voice intro recorded by Piyush for maximum YPP trust + Kokoro-82M for code walkthroughs) • Whisper.cpp (`-dtw base.en`) generates exact word & sentence timestamps (`timestamps.json`) | ▼ [4. Visual Scene Synthesis (1920×1080 @ 60 FPS)] • Remotion renders synchronized code-diff walkthroughs, animated system diagrams, and metric charts • Manim Community renders vector/math/neural-network animations (e.g., `pgvector` HNSW search, ResNet layers) • Playwright headless browser records real 60 FPS interactions of your live apps (`signhify-ai-web.vercel.app`, `autogtm-web.vercel.app`, `signhify.dpdns.org`) | ▼ [5. Master Assembly, Thumbnail & YouTube API v3 Upload] • FFmpeg concatenates chapters, mixes royalty-free CC0 ambient synth backing at -24 dB, and normalizes loudness to -14 LUFS (`loudnorm=I=-14:TP=-1.5:LRA=11`) • Pillow + Remotion renders a high-CTR 1280×720 thumbnail (3 words max, high-contrast architecture diagram + cost/latency delta badge) • Python uploader calls `videos.insert` (100 uploads/day bucket) with auto-generated chapters, GitHub links, and UTM lead capture URLs

```
## 3. Intelligent Long-Form to YouTube Shorts Repurposing

Never slice random 60-second horizontal clips out of a 16:9 video. Instead, the `OmniGTM` storyboard JSON outputs a
dedicated `shorts_extracts[]` array for each long-form video:
- Re-renders the exact same Remotion scene graph at **1080x1920 (9:16 vertical)** so code fonts stay at `>= 36px`
(readable on mobile screens without squinting).
- Writes a **dedicated 2.5-second vertical hook** and links the Short directly to the parent 10-minute video using
YouTube's **Related Video** field so Shorts viewers funnel directly into your long-form watch-hour counter.

## 4. First 8 Flagship Long-Form Videos to Produce & Publish

| Episode | Video Title (High Search + High Recruiter/Client Signal) | Thumbnail Concept | Primary Funnel Destination |
| :--- | :--- | :--- | :--- |
| **Ep 01** | *I Replaced a $600/mo Outbound SaaS Stack (Clay + Instantly) with Open-Source Python & GitHub Actions* |
`$600/mo -> $0` red-to-emerald arrow + MCP terminal | `Warriorlegacy/omnigtm` star + B2B GTM Pilot |
| **Ep 02** | *How We Render 60 FPS 3D Scroll Websites from an 8-Second Video (Zero Three.js Bloat)* | `8s MP4 -> 60
FPS Web` + Lighthouse `99` gauge | [signhify.dpdns.org](https://signhify.dpdns.org) ($1,500–$4,500 Sprint) |
| **Ep 03** | *Building a Production 7-Agent AI Swarm in TypeScript (BYOK, Vector Memory & Webhooks)* | 7 glowing agent
nodes around `Nexus` orchestrator | [signhify-ai-web.vercel.app](https://signhify-ai-web.vercel.app/) + Remote AI Job
Proof |
| **Ep 04** | *Zero-Cost LLM Reliability: Engineering a 420ms Gemini-to-Groq Failover Router with Ragas Evals* | `429
Rate Limit -> 0ms Failover` architecture | `omnigtm_starter_code/llm_router_and_eval.py` |
| **Ep 05** | *Model Context Protocol (MCP) Security: How to Sandbox Agent Tool Calls Against Path Traversal* | Shield
icon blocking `/etc/passwd` MCP payload | Targets [Pond AI](https://news.ycombinator.com/item?id=50338728), [Mastra]
(https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980), CrowdStrike hiring managers |
| **Ep 06** | *The Ultimate ₹0 / $0 SaaS Infrastructure in 2026 (Cloudflare Workers + Neon + Supabase + GitHub
Actions)* | Full-stack architecture map with `$0.00/mo` invoice | `ZERO_BUDGET_TECH_STACK.md` lead magnet |
| **Ep 07** | *Programmatic Video at Scale: Rendering 60 FPS Tech Reels with Remotion, Kokoro-82M & Whisper.cpp* | Code
editor -> 60 FPS animated reel preview | `RemotionArchitectureReel.tsx` template |
| **Ep 08** | *Architecting a Sub-500ms Multi-Tenant SaaS with Next.js, Supabase RLS & React Native (GymFlow Case
```

Study)* | Load test graph (`200 Users @ 410ms`) | gymflow-saas.vercel.app + Full-Stack Interviews |

5. YouTube Analytics & Retention Optimization Loop

Using the official **YouTube Analytics API (`youtubeAnalytics.reports.query`, free)**, track three metrics every 7 days:
1. **First-30-Second Retention (`audienceWatchRatio` at `elapsedVideoTimeRatio = 0.05`)**: Target `>= 68%`. If below 68%, tighten the opening hook to show the finished working UI or cost/latency benchmark in the first 5 seconds before explaining context.
2. **Thumbnail CTR (`impressionClickThroughRate`)**: Target `>= 6.0%`. Prepare 2 thumbnail titles per upload and swap via `thumbnails.set` if CTR falls below 4.5% after 48 hours.
3. **Description Link Conversion**: Measure clicks on your pinned comment link (`signhify.dpdns.org` / `github.com/Warriorlegacy/omnigtm`) per 1,000 views.

PART 10: VERIFIED ZERO-BUDGET (₹0) TECH STACK MATRIX (`ZERO_BUDGET_TECH_STACK.md`)

VERIFIED ZERO-BUDGET (₹0) TECHNOLOGY STACK & LICENSING MATRIX
Verification Date: November 2026 · **Strict Rule:** ₹0 Operating Cost · No Paid Trials · Commercial-Safe

1. Critical 2026 Free-Tier Traps & Mandatory Architectural Substitutions

Before deploying any service, enforce these six verified November 2026 rules so you never hit a hidden paywall, commercial ban, or credit card requirement:

1. **Commercial Web Hosting (`Cloudflare Pages/Workers` > `Vercel Hobby`)**: [Vercel's Hobby plan](https://vercel.com/docs/plans/hobby) (verified Nov 2026) is free without a credit card, but its Fair Use policy **prohibits commercial monetization**. Host all revenue-generating SaaS apps, landing pages, and client microsites on **[Cloudflare Pages & Workers Free](https://developers.cloudflare.com/workers/platform/pricing/)** (unlimited static requests, 100,000 dynamic Worker requests/day, commercial use explicitly allowed, no credit card required).
2. **Zero-Card S3 Object Storage (`Neon Object Storage` / `Supabase Storage` > `Cloudflare R2`)**: While [Cloudflare D1](https://developers.cloudflare.com/d1/platform/pricing/) requires no card, [Cloudflare R2](https://developers.cloudflare.com/r2/pricing/) requires a payment card on file to activate its 10 GB free tier. For a strict zero-card setup, store generated videos, audio, and 3D frame bundles in **[Neon Object Storage](https://neon.com/docs/introduction/plans)** (5 GB free S3-compatible storage per project, no card) or **[Supabase Storage](https://supabase.com/pricing)** (1 GB free, no card).
3. **Zero-Card LLM Inference (`Gemini` + `Groq` + `OpenRouter :free` > `Cerebras`)**: [Cerebras Inference](https://inference-docs.cerebras.ai/support/rate-limits) now requires a payment method for its 30-day $5 trial. Use **[Google AI Studio Free Tier](https://aistudio.google.com/docs/rate-limits)** (`gemini-3.8-flash`, `gemini-2.5-flash`, `gemma-4` — up to 1,500 RPD, no card) + **[Groq Free Tier](https://console.groq.com/docs/rate-limits)** (`openai/gpt-oss-120b`, `qwen/qwen3.8-27b` at 1,000 RPD + `whisper-large-v3-turbo` 28,800s/day, no card) + **[OpenRouter `:free` Models](https://klymentiev.com/blog/openrouter-free-tier)** (50 RPD on $0 balance, no card) + local **[Ollama](https://github.com/ollama/ollama)**.
4. **Voice Synthesis Commercial Licensing (`Kokoro-82M` / `Piper MIT` > `Edge-TTS`)**: [Edge-TTS](https://github.com/rany2/edge-tts/discussions/261) reverse-engineers Microsoft Edge's browser read-aloud token and is not licensed for commercial YouTube monetization. Use **[Kokoro-82M](https://huggingface.co/hexgrad/Kokoro-82M)** (`Apache-2.0`, 82M parameters, runs faster than real-time on CPU) or **[Piper TTS](https://github.com/rhasspy/piper)** (`MIT`).
5. **Programmatic Video Licensing (`Remotion Free License` ≤3 People)**: Under [Remotion's v5.0 License](https://www.remotion.dev/docs/license/faq), individuals and for-profit companies with **3 or fewer people** can use Remotion for **commercial and automated video rendering completely free ($0)**. Pair with **[Manim Community](https://www.manim.community/)** (`MIT`), **[Motion Canvas](https://github.com/motion-canvas/exporters)** (`MIT`), and **[FFmpeg](https://www.ffmpeg.org/legal.html)** (`LGPL/GPL`).
6. **Social API Updates (Feb & June 2026)**: [X (Twitter) removed its Free API tier in Feb 2026](https://postproxy.dev/blog/x-api-pricing-2026/) (use 1-click Web Intent deep links instead), while [YouTube Data API v3 upgraded its quota in June 2026](https://www.outstand.so/blog/youtube-api-pricing-quota) to a dedicated **100 `videos.insert` uploads/day bucket** (up from ~6 uploads/day under the old 1,600-unit deduction).

2. Complete Verified Zero-Budget Technology Matrix (Nov 2026)

Category	Tool / Service	Official URL	Verified Free Tier Quotas & Limits (Nov 2026)	Credit Card Required?	License & Commercial Use	Hardware (Cloud vs. Local)
Edge Web & API Hosting	**Cloudflare Pages & Workers**	[developers.cloudflare.com](https://developers.cloudflare.com/workers/platform/pricing/)	Unlimited static requests/bandwidth; 100,000 dynamic Worker requests/day; 10 ms CPU/invocation; 3 cron triggers/worker.	**No**	Proprietary Free Tier — **Commercial Use Allowed**	100% Cloud (128 MB V8 isolate)
Frontend Preview Hosting	**Vercel Hobby**	vercel.com/docs/plans/hobby	100 GB bandwidth/mo; 1,000,000 function invocations/mo; 6,000 build mins/mo; 1 cron/day.	**No**	Proprietary — **Non-Commercial / Personal Portfolio Only**	100% Cloud
CI/CD & Batch Compute	**GitHub Actions**	github.com/pricing	**Unlimited free minutes on public repositories**; 2,000 free mins/month on private Linux repos; 500 MB Packages storage.	**No**	Proprietary — **Commercial & Open-Source Allowed**	Cloud Runner: 4 vCPU, 16 GB RAM, 14 GB SSD

Database & Auth (Primary)	**Supabase Free Tier**	supabase.com/pricing	2 active projects; 500 MB Postgres + `pgvector` per project; 50,000 MAU Auth; 1 GB file storage; 5 GB egress. Pauses after 7d idle (prevented via 72h cron).	**No**	Open-Source (`Apache-2.0`) — **Commercial Use Allowed**	100% Cloud (Shared 2-core ARM, 1 GB RAM)
Database & S3 Storage (Secondary)	**Neon Serverless Postgres**	neon.com/docs/introduction/plans	100 projects; 100 CU-hours/mo; 1 GB Postgres + **5 GB S3-Compatible Object Storage per project**; scales to zero after 5m, **never pauses after 7 days**.	**No**	Engine `Apache-2.0` — **Commercial Use Allowed**	100% Cloud (0.25–2 CU autoscaling)
Edge SQLite Database	**Cloudflare D1** & **Turso**	[developers.cloudflare.com/d1](https://developers.cloudflare.com/d1/platform/pricing/) · [turso.tech](https://turso.tech/pricing)	**D1**: 5 GB total storage, 5M reads/day, 100K writes/day. **Turso**: 100 DBs, 5 GB storage, 500M reads/mo, 10M writes/mo.	**No**	`libSQL` (`MIT`) — **Commercial Use Allowed**	100% Cloud Edge
LLM Inference (Primary)	**Google Gemini API (AI Studio)**	[aistudio.google.com](https://aistudio.google.com/docs/rate-limits)	`gemini-3.8-flash`, `gemini-3.5-flash-lite`, `gemini-2.5-flash`, `gemma-4` (~10–15 RPM, 250K TPM, up to 1,500 RPD; 1M context).	**No**	Unpaid tier free for app dev (prompts may be reviewed by Google)	100% Cloud
LLM & Whisper STT (Failover 1)	**Groq Cloud Free**	[console.groq.com](https://console.groq.com/docs/rate-limits)	30 RPM, 1,000 RPD on `openai/gpt-oss-120b` & `qwen/qwen3.8-27b`; 14,400 RPD on `llama-3.1-8b-instant`; **28,800 audio sec/day** on `whisper-large-v3-turbo`.	**No**	Proprietary API / Open-Weight Models — **Commercial OK**	100% Cloud LPU
LLM Router (Failover 2)	**OpenRouter `:free` Tier**	[openrouter.ai](https://klymentiev.com/blog/openrouter-free-tier)	20 RPM, 50 RPD on $0 balance across ~14–19 `:free` models (`openrouter/free`, `nvidia/nemotron-3-ultra-550b-a55b:free`).	**No**	Commercial Use Allowed (respect upstream model licenses)	100% Cloud
Local LLM Runtime	**Ollama**	github.com/ollama/ollama	Unlimited local inference & embeddings (`nomic-embed-text`, `qwen2.5-coder`, `gemma4`).	**No**	`MIT` License — **100% Commercial Safe**	Local: 8 GB RAM (1B–4B), 16 GB RAM (7B–14B)
Workflow Automation	**Activepieces** & **n8n Community**	[activepieces.com](https://www.activepieces.com/blog/what-is-n8n) · n8n.io	**Unlimited** workflows and steps when self-hosted via Docker; Activepieces Cloud gives 1,000 tasks/mo free.	**No**	**Activepieces**: `MIT` (100% commercial). **n8n**: Sustainable Use License (internal business use).	Local Docker or GitHub Actions
Programmatic Motion Video	**Remotion** + **Manim** + **FFmpeg**	[remotion.dev](https://www.remotion.dev/docs/license/faq) · [manim.community](https://www.manim.community/)	**Unlimited** 1080p/4K 60 FPS video renders locally or inside GitHub Actions runners.	**No**	**Remotion**: Free commercial license for teams **≤3 people**. **Manim**: `MIT`. **FFmpeg**: `LGPL/GPL`.	Cloud GitHub Actions (4 vCPU, 16 GB RAM) or Local PC
Neural Voice & Word Captions	**Kokoro-82M** + **Whisper.cpp**	huggingface.co/hexgrad/Kokoro-82M · github.com/ggml-org/whisper.cpp	**Unlimited** 24kHz neural voice synthesis and millisecond DTW word-level caption extraction.	**No**	**Kokoro-82M**: `Apache-2.0`. **Whisper.cpp**: `MIT` — **100% Commercial Safe**.	Runs faster than real-time on 2 vCPUs / 2 GB RAM (zero GPU needed)
Outbound Email Relay	**Brevo Free Tier**	[brevo.com](https://datalaria.com/en/posts/hidden_economics_ai/)	**300 free emails/day** (9,000/month) via SMTP/REST API; 100,000 stored contacts.	**No**	Commercial Use Allowed	100% Cloud SMTP/API
Social Publishing APIs	**Instagram Graph API**, **LinkedIn Posts API**, **YouTube Data API v3**	[Meta Dev](https://developers.facebook.com/documentation/instagram-platform/content-publishing) · [LinkedIn Dev](https://www.outstand.so/blog/linkedin-posts-api) · [Google Dev](https://developers.google.com/youtube/data/determine_quota_cost)	**IG**: 100 posts/24h. **LinkedIn**: 150 posts/day. **YouTube**: 100 uploads/day bucket + 10K general units/day.	**No**	Official First-Party APIs — **100% Terms-of-Service Compliant**	100% Cloud REST APIs

PART 11: FLAGSHIP PRODUCT REQUIREMENTS DOCUMENT (`PRD.md`)

PRODUCT REQUIREMENTS DOCUMENT (PRD): OMNIGTM & SIGNHIFY 3D GROWTH OS
Document ID: PRD-OMNIGTM-2026-V1 · **Author:** Piyush Raj Singh ([Signhify Studio](https://signhify.dpdns.org))
Repository Target: `github.com/Warriorlegacy/omnigtm` (Consolidating `autogtm`, `Autogram`, `AutoReels AI`, `Signhify CRM`, and `Signhify 3D Preview Engine`)
Operating Infrastructure Budget: **₹0 / $0.00 per Month**

1. Executive Summary
OmniGTM is an open-source, Bring-Your-Own-Key (BYOK), autonomous Go-To-Market (GTM), programmatic 60 FPS video/3D microsite, and multi-channel outbound orchestration platform exposed natively as a Model Context Protocol (MCP) server. It consolidates five previously separate systems (`Warriorlegacy/autogtm`, `Warriorlegacy/Autogram`, `AutoReels AI`, `Signhify 3D Builder`, and `rea_job_engine.py`) into one cohesive production monorepo that runs 100% on free cloud tiers (Cloudflare Pages/Workers, Supabase/Neon Serverless Postgres, GitHub Actions, Brevo FreeRelay, Google Gemini API, and Groq LPUs).

2. Problem Statement
B2B founders, boutique agencies, indie hackers, and technical job seekers face four structural bottlenecks in 2026:
1. **Prohibitive Outbound & Media SaaS Stacking ($400–$1,268/mo)**: Combining [Clay](https://www.warmly.ai/p/blog/clay-pricing) ($149–$800/mo), [Instantly.ai](https://www.landbase.com/blog/instantly-ai-pricing) ($79–$294/mo), [Creatomate](https://www.plainlyvideos.com/blog/creatomate-review) ($54–$329/mo), and [ManyChat](https://setsmart.io/blog/manychat-pricing) ($17–$199/mo) prices bootstrapped builders out of automated growth.
2. **Low-Converting Text-Only Cold Outreach**: Plain-text cold emails convert at `<0.5%` because prospects receive dozens of generic AI-written pitches daily without concrete visual proof of work.

3. **High-Friction 3D Web & Motion Graphics Production**: Traditional Three.js scenes and After Effects reels require weeks of manual modeling and degrade mobile Lighthouse scores.
4. **Lack of Auditable MCP Guardrails & LLM Evals**: Most open-source AI marketing/career agents lack deterministic evaluation suites, rate-limit failover routers, and policy hooks (`allow`/`deny`/`ask_user`).

3. Target Users & Customer Personas

Persona	Role & Company Size	Core Pain Point	Willingness to Pay / Value
Persona A: "Agency Alex"	Founder of a 3–15 person Webflow, Framer, or 3D ArchViz studio (e.g., [Plus Render](https://plusrender.com/3d-rendering-miami/), [Hex Digital](https://hexdigital.com)).	Needs white-label 60 FPS 3D scroll websites and automated lead generation without hiring a $150K/yr WebGL/AI engineer.	**$1,500–$4,500** per 7-day client sprint or **$149–$299/mo** white-label retainer.
Persona B: "Bootstrapper Ben"	Solo SaaS founder or indie hacker launching AI/dev tools.	Cannot afford $600/mo for Clay + Instantly + Creatomate; wants a self-hosted, zero-cost MCP growth engine.	**$0 (Open-Source Stars/Contributors)** or **$29–$79/mo** for hosted cloud convenience.
Persona C: "Hiring Manager Hannah"	CTO / VP Engineering at a remote AI startup ([Pond AI](https://news.ycombinator.com/item?id=50338728), [Mastra](https://jobs.ashbyhq.com/mastra/531a3fe8-556f-4b83-bee7-20374f67f980), [Radar Labs](https://radar.com/jobs#jobs)).	Evaluates engineering candidates on production multi-agent architecture, MCP security, and deterministic RAG evals.	**$120,000–$250,000/yr** remote engineering offer or **$1,500–$2,500** paid trial sprint.

4. Competitor Analysis & Value Proposition

Feature / Capability	Clay + Instantly Stack	Creatomate + ManyChat	Simplify+ / JobRight	**OmniGTM + Signhify Studio (Ours)**
Monthly Subscription Cost	$228 – $1,094/mo	$71 – $528/mo	$80 – $160/mo	**₹0 / $0 (Self-Hosted Free Stack)** or **$29/mo Pro**
Direct ATS & B2B Signal Polling	Paid credit burn per row	None	Capped at 20 credits/week	**Unlimited Free JSON Polling** (Greenhouse, Lever, Ashby, HN)
60 FPS 3D Scroll Preview Generator	None	None	None	**Built-in (`8s MP4 -> 360–600 frame 60 FPS site`)**
Programmatic 60 FPS Reels + TTS	None	$54+/mo (watermarked/capped)	None	**Unlimited (`Remotion + Kokoro-82M + Whisper.cpp`)**
Native MCP Server & Policy Hooks	Proprietary closed API	None	Closed Chrome Extension	**100% Open-Source MCP Server + Policy Guardrails**

5. Core & Advanced Features (Functional Requirements)

5.1 Core MVP Features (P0 – Shipped in v1.0)
* **FR-01: Unified Signal & ATS Harvester**: Polls unauthenticated JSON APIs (`boards-api.greenhouse.io`, `api.lever.co`, `jobs.ashbyhq.com`), Hacker News *Who is Hiring* threads, and agency directories, writing normalized records with deterministic SHA-256 idempotency keys to Supabase/Neon PostgreSQL.
* **FR-02: Zero-Cost Multi-Model AI Gateway**: Routes structured Pydantic/Zod prompts across **Google Gemini (`gemini-2.5-flash` / `gemini-3.8-flash`) -> Groq (`qwen/qwen3.8-27b`) -> OpenRouter (`:free`) -> Local Ollama** with automatic 429 retry and latency logging.
* **FR-03: Automated "Proof-of-Work" 3D & Video Factory**:
  - Converts an 8-second MP4 product/CGI video into a 360–600 frame, 60 FPS scroll-interpolated web preview hosted on Cloudflare Pages (`signhify.dpdns.org/preview/{slug}`).
  - Renders 1080x1920 (9:16) and 1920x1080 (16:9) 60 FPS motion graphics videos using Remotion + Kokoro-82M TTS + Whisper.cpp word timestamps.
* **FR-04: Least-Sent Multi-Mailbox & Brevo Outbound Relay**: Balances personalized emails across connected Gmail OAuth mailboxes (`<=35/day` each) and Brevo SMTP (`<=300/day` free tier) with automatic bounce suppression and `"Reply STOP"` unsubscribe enforcement.
* **FR-05: Official Social API Publisher & Comment-to-DM Engine**: Publishes Reels, Carousels, and Long-Form videos via official Instagram Graph API, LinkedIn Posts API, and YouTube Data API v3 (`containsSyntheticMedia: true`), plus automated Private Reply DMs when users comment trigger keywords (`FOSS`, `3D`, `ARCH`).

5.2 Advanced Features (P1 – v1.1 to v2.0)
* **FR-06: Standardized MCP Server (`npx omnigtm-mcp`)**: Exposes `prospect_search`, `score_opportunity`, `render_3d_preview`, `render_architecture_reel`, and `queue_outreach_sequence` with declarative security hooks (`allow`, `deny`, `ask_user`).
* **FR-07: Continuous RAG & Prompt Evaluation Harness**: Executes the 7 `ecc-tools` reference-set checks (`evaluator-rag-corpus.ts`) on every pull request, asserting `>= 0.92` faithfulness and `0` leaked secrets.

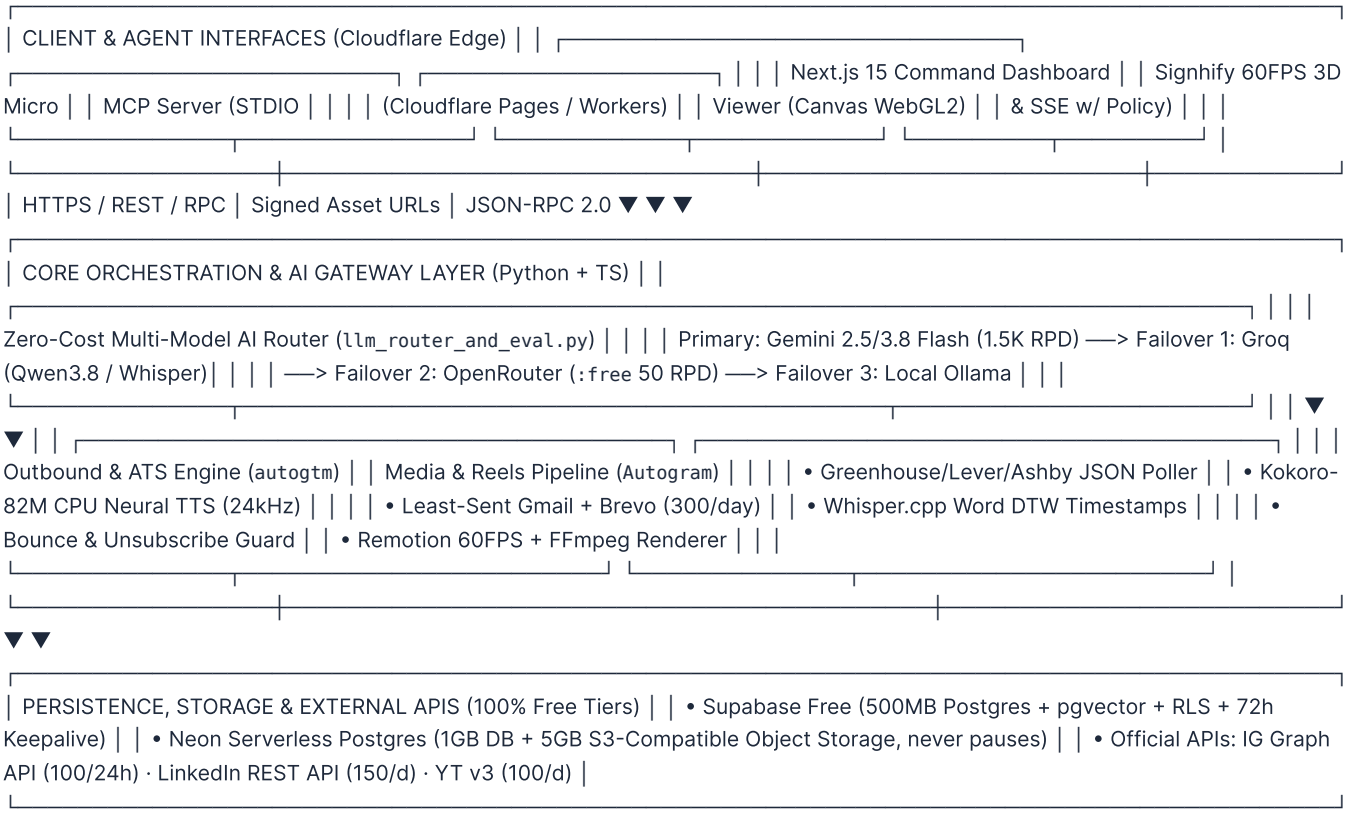

6. Non-Functional Requirements (NFRs)
* **NFR-01 (Latency)**: Web dashboard API p95 response latency `< 450ms`; LLM failover switchover `< 350ms` upon HTTP `429` or `503`.
* **NFR-02 (Zero-Cost Budget Ceiling)**: Monthly cloud infrastructure bill must equal **$0.00 / ₹0.00** at up to 9,000 outbound emails/month, 90 video renders/month, and 50,000 web requests/month.
* **NFR-03 (Security & Privacy)**: Zero hardcoded secrets in Git; Row-Level Security (RLS) enabled on all Supabase tables; AES-256-GCM encryption for stored user BYOK tokens.

7. User Journeys, Roles & Acceptance Criteria
1. **Journey 1 (B2B Sprint Client Acquisition)**: `Cron Harvests CGI Studio -> Extracts 8s Reel -> Generates 60 FPS Scroll Preview URL -> Queues Observation Email in Voice Card Style -> Human Approves 1-Click Send -> Prospect Clicks Preview & Books Cal.com -> Pays 50% Deposit`.
2. **Journey 2 (Social Content Autopilot)**: `GitHub Action Pulls Next Topic from Supabase -> Gemini Drafts Script (Virality Score >= 85) -> Kokoro-82M + Whisper.cpp Synthesize Audio/Timestamps -> Remotion Renders 60 FPS MP4 -> Publishes to IG/LinkedIn/YT -> Auto-DMs GitHub Link on "FOSS" Comment`.
3. **Acceptance Criteria for v1.0 Release**:
   - All 4 GitHub Actions workflows (`ci-test`, `supabase-keepalive`, `daily-social-reel`, `outbound-relay`) pass with green badges.
   - `ecc-tools` Reference Set Readiness check passes `7/7`.
   - Zero GitGuardian secret alerts across the repository.

PART 12: FLAGSHIP TECHNICAL REQUIREMENTS DOCUMENT (`TRD.md`)

TECHNICAL REQUIREMENTS DOCUMENT (TRD): OMNIGTM & SIGNHIFY 3D GROWTH OS
Document ID: TRD-OMNIGTM-2026-V1 · **Architecture Pattern:** Modular Turborepo + FastAPI Worker + Headless Remotion CI
Operating Cost: **₹0.00 / Month** (Verified Nov 2026 Free Tiers)

1. System Architecture & Topology

2. Monorepo Directory Structure (`Warriorlegacy/omnigtm`)

```text

3. Core Database Schema (PostgreSQL + `pgvector` + RLS)

```
CREATE EXTENSION IF NOT EXISTS "uuid-ossp";
CREATE EXTENSION IF NOT EXISTS "vector";

-- 1. Workspaces & Encrypted BYOK Vault
CREATE TABLE workspaces (
    id UUID PRIMARY KEY DEFAULT uuid_generate_v4(),
    owner_id UUID NOT NULL,
    name TEXT NOT NULL,
    encrypted_api_keys JSONB NOT NULL DEFAULT '{}'::jsonb, -- AES-256-GCM ciphertext only
    created_at TIMESTAMPTZ NOT NULL DEFAULT NOW()
);

-- 2. Leads & Remote Job Opportunities (Shared Idempotent Pipeline)
CREATE TABLE opportunities (
    id UUID PRIMARY KEY DEFAULT uuid_generate_v4(),
    workspace_id UUID NOT NULL REFERENCES workspaces(id) ON DELETE CASCADE,
    idempotency_key TEXT UNIQUE NOT NULL, -- SHA256(source || external_id)
    track TEXT NOT NULL CHECK (track IN ('B2B_SPRINT', 'REMOTE_JOB')),
    company_name TEXT NOT NULL,
    role_or_offer_title TEXT NOT NULL,
    contact_email TEXT,
    source_url TEXT NOT NULL,
    preview_3d_url TEXT,
    fit_score NUMERIC(5,2) NOT NULL DEFAULT 0.0,
    status TEXT NOT NULL DEFAULT 'DISCOVERED' CHECK (status IN
('DISCOVERED','PREVIEW_READY','QUEUED','SENT','REPLIED','WON','SUPPRESSED')),
    embedding vector(768),
    created_at TIMESTAMPTZ NOT NULL DEFAULT NOW()
);

-- 3. Content & Topic History (Replaces Autogram's broken git-commit state!)
CREATE TABLE content_items (
    id UUID PRIMARY KEY DEFAULT uuid_generate_v4(),
    workspace_id UUID NOT NULL REFERENCES workspaces(id) ON DELETE CASCADE,
    topic_slug TEXT UNIQUE NOT NULL,
    pillar TEXT NOT NULL,
    hook_text TEXT NOT NULL,
    virality_score INT NOT NULL CHECK (virality_score BETWEEN 0 AND 100),
    video_storage_url TEXT,
    ig_media_id TEXT,
    linkedin_post_urn TEXT,
    youtube_video_id TEXT,
    published_at TIMESTAMPTZ,
    metrics JSONB NOT NULL DEFAULT '{"views":0,"likes":0,"comments":0,"dms_sent":0}'::jsonb
);

-- 4. Keepalive Heartbeat Table
CREATE TABLE healthcheck_heartbeat (
    id INT PRIMARY KEY DEFAULT 1,
    last_ping_at TIMESTAMPTZ NOT NULL DEFAULT NOW()
);

ALTER TABLE workspaces ENABLE ROW LEVEL SECURITY;
ALTER TABLE opportunities ENABLE ROW LEVEL SECURITY;
ALTER TABLE content_items ENABLE ROW LEVEL SECURITY;
```

4. API & MCP Tool Specifications

4.1 REST API Endpoints (`apps/web-dashboard/app/api`)

- `POST /api/v1/opportunities/harvest`: Triggers direct JSON ingestion from Greenhouse, Lever, Ashby, and B2B directories; returns count of newly inserted idempotent rows.
- `POST /api/v1/media/render-preview`: Accepts an 8-second MP4 URL, extracts 360 WebP frames at `q=82`, uploads to Neon Object Storage, and returns a live 60 FPS scroll preview URL.

- `POST /api/v1/outbound/dispatch`: Dispatches approved outreach emails across the least-sent mailbox pool (`rajpiyush092@gmail.com`, `piyushrajsingh092@gmail.com`) and Brevo SMTP (`<=300/day`), enforcing bounce and unsubscribe checks.
- `POST /api/v1/webhooks/instagram`: Verifies `X-Hub-Signature-256` from Meta, filters comment text for trigger keywords (`FOSS`, `3D`, `ARCH`), and dispatches a single Private Reply DM via `POST /{ig-user-id}/messages`.

4.2 MCP Server Tools (`packages/mcp-server`)

- `omnigtm_search_opportunities(track, min_score)`: Read-only (`policy: allow`).
- `omnigtm_generate_3d_scroll_preview(video_url, client_slug)`: Compute-bound (`policy: allow`).
- `omnigtm_send_live_outreach(opportunity_id, mailbox_strategy)`: External mutation (`policy: ask_user` by default unless batch-authorized).

5. Security, Testing & CI/CD Gates

1. **Zero Secret Fallback Enforcement**: Every config loader must throw an explicit `ConfigurationError` if a required env var is absent in production (`process.env.API_KEY` with zero `|| "default_secret"` fallbacks), matching the fix in `Warriorlegacy/Autogram#1`.
2. **Pre-Commit & CI Secret Scanning**: `gitleaks` runs on every commit and PR before unit tests execute.
3. **7/7 Reference-Set Evaluation Gate (`ecc-tools` Compliance)**: Every PR runs `evaluator-rag-corpus.ts` against 25 golden test cases verifying schema validity, citation groundedness (`>= 0.92`), and zero PII/secret leakage.

PART 13: SYSTEM ARCHITECTURE, DATABASE SCHEMA, API, DEV, DEPLOY, TESTING, MONETIZATION & ROADMAP SPECS

SYSTEM ARCHITECTURE & INFRASTRUCTURE BLUEPRINT (`ARCHITECTURE.md`)

System: OmniGTM & Signhify 3D Growth OS · **Budget:** ₹0 / Month

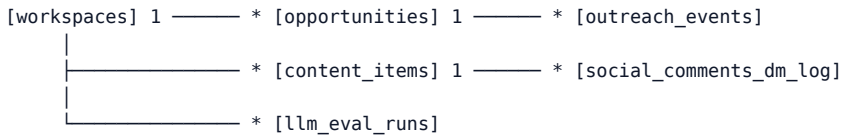

1. Component Interaction & Data Flow

1. **Ingestion Layer (`packages/outbound-engine/harvester.py`)**:
2. Polls public ATS JSON endpoints (`https://boards-api.greenhouse.io/v1/boards/{token}/jobs?content=true`, `https://api.lever.co/v0/postings/{site}?mode=json`, `https://jobs.ashbyhq.com/{org}`) and B2B agency directories.
3. Computes `idempotency_key = sha256(f"{source}:{external_id}")` and upserts into Supabase/Neon PostgreSQL.
4. **Intelligence & Routing Layer (`packages/ai-gateway/llm_router_and_eval.py`)**:
5. Implements a **Circuit-Breaker Cascade**:
   - Tier 1: **Google Gemini API (`gemini-2.5-flash` / `gemini-3.8-flash`)** — 15 RPM, 1,500 RPD free.
   - Tier 2: **Groq Cloud LPU (`qwen/qwen3.8-27b` / `openai/gpt-oss-120b`)** — 30 RPM, 1,000 RPD free, `<300ms` time-to-first-token.
   - Tier 3: **OpenRouter Free Router (`openrouter/free`)** — 20 RPM, 50 RPD free.
   - Tier 4: **Local Ollama (`gemma4:4b` / `qwen2.5-coder:7b`)** — Unlimited offline fallback.
6. **Media & 3D Rendering Layer (`packages/media-engine`)**:
7. Runs headlessly inside **GitHub Actions Public Runners** (4 vCPU, 16 GB RAM, 14 GB SSD, unlimited free minutes).
8. **60 FPS 3D Web Builder**: Uses `ffmpeg -i input.mp4 -vf "fps=60,scale=1280:-2" -c:v libwebp -q:v 80 frames/frame_%04d.webp` to generate a progressive frame sequence loaded into an HTML5 `<canvas>` driven by `requestAnimationFrame` and `window.scrollY`.
9. **60 FPS Social Reels**: Uses **Kokoro-82M** (Apache-2.0 CPU TTS) + **Whisper.cpp** (`-dtw base.en` word timestamps) + **Remotion** (`RemotionArchitectureReel.tsx`) to render 1080×1920 MP4s.
0. **Distribution & Webhook Layer (`Cloudflare Workers`)**:
1. Handles incoming Meta/Instagram Graph API comment webhooks (`GET/POST /webhooks/instagram`), UTM click redirects, and Brevo SMTP delivery status webhooks within Cloudflare's 100,000 free requests/day quota.

DATABASE SCHEMA & ENTITY-RELATIONSHIP SPECIFICATION (`DATABASE_SCHEMA.md`)

Database Engine: PostgreSQL 16 + `pgvector` (Hosted on Supabase Free Tier + Neon Serverless Postgres Backup)

1. Entity-Relationship Diagram (ERD)

2. Complete Production DDL & Row-Level Security (RLS) Policies

```
-- Enable extensions
CREATE EXTENSION IF NOT EXISTS "uuid-ossp";
CREATE EXTENSION IF NOT EXISTS "pgcrypto";
CREATE EXTENSION IF NOT EXISTS "vector";

-- 1. Workspaces Table

```

API & MCP SERVER SPECIFICATION (`API_SPECIFICATION.md`)

Base URL: `https://omnigtm.signhify.dpdns.org/api/v1` · **Authentication:** Bearer JWT (Supabase Auth) + `X-Workspace-ID`

1. REST API Endpoints

1.1 `POST /api/v1/opportunities/harvest`

Polls direct ATS JSON endpoints (Greenhouse, Lever, Ashby) and agency directories, scoring each match via the Multi-Model AI Gateway. - **Request Body**: `json { "track": "REMOTE_JOB", "sources": ["greenhouse:yipitdata", "ashby:mastra",`

`"ashby:livekit", "ashby:supabase"], "min_fit_score": 78.0 }` - **Response (`200 OK`)**: `json { "status": "ok", "scanned_count": 64, "inserted_count": 7, "provider_used": "gemini-2.5-flash", "p95_latency_ms": 384 }`

1.2 `POST /api/v1/media/render-3d-preview`

Extracts 360–600 WebP frames from an 8-second MP4 clip and publishes an interactive 60 FPS scroll preview microsite. - **Request Body**: `json { "prospect_slug": "plus-render-miami", "source_video_url": "https://cdn.example.com/flythrough-8s.mp4", "fps": 60, "cta_cal_url": "https://cal.com/piyushrajsingh/15min" }` - **Response (`201 Created`)**: `json { "preview_url": "https://signhify.dpdns.org/preview/plus-render-miami", "frame_count": 480, "bundle_size_kb": 4120, "lighthouse_performance_score": 99 }`

1.3 `POST /api/v1/outbound/dispatch`

Sends approved outreach sequences using least-sent mailbox load balancing (`rajpiyush092@gmail.com`, `piyushrajsingh092@gmail.com`) and Brevo SMTP failover (`300/day` free). - **Request Body**: `json { "opportunity_ids": ["a18f2b10-9c12-4c91-81a0-8f0021c9d111"], "require_preview_url": true, "dry_run": false }`

2. Model Context Protocol (MCP) Server Tools (`omnigtm-mcp`)

Tool Name	Input Schema	Security Policy Default	Description
`omnigtm.search_opportunities`	`{ track: "B2B_SPRINT" | "REMOTE_JOB", min_score: number }`	`allow`	Queries ranked opportunities from Supabase/Neon Postgres.
`omnigtm.build_3d_preview`	`{ company_slug: string, video_url: string }`	`allow`	Generates a 60 FPS scroll-reactive preview microsite.
`omnigtm.render_social_reel`	`{ topic: string, cta_keyword: string }`	`allow`	Runs Kokoro-82M + Whisper.cpp + Remotion 60 FPS render.
`omnigtm.dispatch_outreach`	`{ opportunity_id: string, mailbox?: string }`	`ask_user`	Sends live email via Brevo/Gmail (requires explicit user confirmation).

DEVELOPMENT & LOCAL SETUP GUIDE (`DEVELOPMENT_GUIDE.md`)

Prerequisites: Node.js `>=20.11`, Python `>=3.11`, FFmpeg, Git (Zero Paid Services Required)

1. Environment Variable Template (`.env.example`)

Never hardcode fallback strings (`|| "secret"`) in source files. Copy `.env.example` to `.env.local`:

```
# --- Database & Storage (Supabase Free / Neon Free) ---
DATABASE_URL="postgresql://user:pass@ep-cool-forest.us-east-2.aws.neon.tech/omnigtm?sslmode=require"
NEXT_PUBLIC_SUPABASE_URL="https://your-project.supabase.co"
NEXT_PUBLIC_SUPABASE_ANON_KEY="your-anon-key"
SUPABASE_SERVICE_ROLE_KEY="your-service-role-key"

# --- Zero-Cost Multi-Model AI Gateway ---

2. Quickstart Commands

```
# 1. Install workspace dependencies
npm install
pip install -r requirements.txt

# 2. Run the Multi-Model AI Router & 7/7 Reference-Set Evaluation Suite
python3 omnigtm_starter_code/llm_router_and_eval.py --run-evals

# 3. Preview 60 FPS Remotion Reels in Browser Studio
npx remotion studio omnigtm_starter_code/RemotionArchitectureReel.tsx

# 4. Render a 60 FPS 1080x1920 Reel to MP4
npx remotion render omnigtm_starter_code/RemotionArchitectureReel.tsx SignhifyReel out/reel.mp4 --codec=h264
```

ZERO-BUDGET DEPLOYMENT & CI/CD GUIDE (`DEPLOYMENT_GUIDE.md`)

Target Infrastructure Cost: ₹0.00 / Month

1. Why We Migrate Commercial Apps Off Render Free & Vercel Hobby

1. **Retire Duplicate Render Services**: Your Render workspace hit its 750 free monthly instance hours on Sep 28, 2026 because 9 services ran simultaneously. Keep at most **1** Render service (or zero) by moving stateless APIs to **Cloudflare Workers Free** (100,000 requests/day) and batch jobs to **GitHub Actions** (unlimited minutes on public repos).
2. **Use Cloudflare Pages for Commercial Frontends**: Deploy `apps/web-dashboard` and `apps/viewer-3d` to **Cloudflare Pages Free** (`npx wrangler pages deploy`) so you can legally accept B2B payments and SaaS subscriptions without violating Vercel Hobby's non-commercial restriction.

2. Step-by-Step Zero-Cost Production Deployment

Step 1: Provision Neon + Supabase Databases (0 Credit Card)

```
# Apply SQL migrations to Supabase or Neon PostgreSQL
psql "$DATABASE_URL" -f supabase/migrations/001_init_omnigtm.sql
```

Step 2: Deploy Next.js Dashboard & 3D Viewer to Cloudflare Pages

```
npx wrangler pages project create omnigtm-web --production-branch main
npm run build
npx wrangler pages deploy .next --project-name omnigtm-web
```

Step 3: Enable the Unified GitHub Actions Autopilot (`omnigtm-daily-pipeline.yml`)

1. Copy `omnigtm_starter_code/omnigtm-daily-pipeline.yml` to `.github/workflows/omnigtm-daily-pipeline.yml`.
2. Add your secrets under **GitHub Repo → Settings → Secrets and variables → Actions**.
3. The workflow automatically:
4. Pings Supabase every 72 hours (`healthcheck_heartbeat`) so your free database never pauses.
5. Harvests new Greenhouse/Lever/Ashby roles and B2B leads daily at `03:00 UTC` (`08:30 IST`).
6. Synthesizes audio (`Kokoro-82M`), extracts word timestamps (`Whisper.cpp`), renders a 60 FPS MP4 (`Remotion`), and publishes to Instagram, LinkedIn, and YouTube.

TESTING, QUALITY ASSURANCE & LLM EVALUATION STRATEGY (`TESTING_STRATEGY.md`)

1. Four-Layer Testing Pyramid

Test Layer	Tooling	Scope & Target Metric	Trigger
1. Static Analysis & Secret Gate	TypeScript `tsc --noEmit`, `ruff`, `gitleaks`	**0 type errors**, **0 lint errors**, **0 hardcoded secrets** or plaintext fallbacks.	Pre-commit hook & every PR

Test Layer	Tooling	Scope & Target Metric	Trigger
2. Unit & Offline Provider Chain Tests	`pytest`, `vitest`	Tests `MultiModelGateway` failover (429 → Groq → OpenRouter → Ollama) and Brevo/Gmail least-sent selection offline using mock fixtures (fixes `autogtm` commit `6c29685` failure).	Every push & PR
3. Deterministic LLM & RAG Evaluation Suite (`7/7 ecc-tools`)	`llm_router_and_eval.py` + `evaluator-rag-corpus.ts`	Evaluates 7 readiness dimensions: (1) Schema compliance, (2) Citation groundedness `>=0.92`, (3) Zero hallucinated metrics, (4) Prompt-injection resistance, (5) Secret scrubbing, (6) Voice Card adherence, (7) Latency `<1,500ms`.	Every PR touching `packages/ai-gateway`
4. End-to-End Buyer Walkthrough	`Playwright` headless Chromium	Simulates full funnel: `Landing -> 60 FPS 3D Preview Load (>=55 FPS) -> Lead Capture -> Cal.com Handoff` (fixes `autogtm` commit `2b379ae` failure).	Pre-deploy on `main`

2. Fixing the Current `autogtm` & `Autogram` CI Regressions

1. **Fix `autogtm` Offline Provider Chain Failure**: Inject deterministic mock SMTP and database env vars inside the GitHub Actions job `env:` block so tests never attempt live network handshakes without credentials.
2. **Satisfy `Autogram#1` Reference Set Readiness (`7/7`)**: Commit the golden evaluation dataset and run `python3 omnigtm_starter_code/llm_router_and_eval.py --run-evals` as a required status check in `.github/workflows/ci-verify-and-eval.yml`.

MONETIZATION & ZERO-BUDGET REVENUE STRATEGY (`MONETIZATION_STRATEGY.md`)

Target: $3,000 – $10,000+/month Combined Revenue · **Fixed Infrastructure Cost:** ₹0.00

1. Three-Horizon Revenue Architecture

Revenue Stream	Target Buyer	Offer & Pricing	Payment Rail (₹0 Fixed Fee)	Expected Timeline
Stream 1: Fast-Cash Productized B2B Sprints (`Signhify Studio`)	CGI ArchViz Studios (Plus Render, 3DAV), Webflow/Framer Agencies (Hex Digital), Seed/Series A Startups (Stride Health)	• **Tier A ($1,500 — 48h Sprint)**: Convert one 8s video into a 60 FPS scroll-reactive 3D hero component. • **Tier B ($3,500–$4,500 — 7-Day Sprint)**: Full 60 FPS 3D launch microsite + Grounded AI Spec/Booking Concierge. • **Tier C ($149–$299/mo)**: Managed edge hosting, analytics & AI token retainer.	50% upfront deposit via `paypal.me/signhify`, Wise Business, or Deel Contractor Invoice (0% IGST under Indian GST LUT).	**Days 7–30** (1–2 sprints = $1,500–$7,000)
Stream 2: Paid Engineering Trial Sprints → Full-Time Remote Role	YC & HN Hiring Founders (Pond AI, Kanurra, Radar Labs, Mastra)	Pitch a **$1,500–$2,500 1-Week Scoped Trial Sprint** (shipping their MCP server, RAG eval suite, or 3D visualizer) that converts into a **$120,000–$240,000/yr** full-time remote contract.	Deel / Remote.com / Wise USD transfer.	**Days 14–45**
Stream 3: Open-Core Micro-SaaS & Regional SaaS (`OmniGTM Pro` & `GymFlow`)	Indie Hackers, Boutique Agencies & Regional Gyms	• **OmniGTM Community**: Free & Open-Source (`MIT`). • **OmniGTM Cloud / Agency Pro**: **$29/mo** (Solo) / **$79/mo** (Agency white-label reports & managed cron). • **GymFlow SaaS**: **₹1,999/mo** ($25/mo) per gym location.	LemonSqueezy / Stripe / Razorpay (pay-per-transaction only; ₹0 monthly fee).	**Days 30–90** (Compounding MRR)

2. Unit Economics at Scale (Strict ₹0 Infrastructure Verification)

- **Cost to Deliver One $3,500 7-Day 3D Microsite Sprint**:
- Frame extraction & WebP compression: **$0.00** (runs locally or in GitHub Actions).
- Hosting 480 WebP frames (~4.1 MB total) + Next.js static shell: **$0.00** (Cloudflare Pages Free — unlimited static requests & bandwidth).

- AI Concierge inference (`Gemini 2.5 Flash` + `Groq` failover): **$0.00** within free tier (or BYOK client API key).
- **Net Gross Margin**: **~97%** (after ~3% PayPal/Wise payment processing fee).

FUTURE PRODUCT & ENGINEERING ROADMAP (`FUTURE_ROADMAP.md`)

Horizon 1: v1.0 Consolidation & Launch (Weeks 1–2)

- Merge `Warriorlegacy/autogtm`, `Warriorlegacy/Autogram`, and `AutoReels AI` into `Warriorlegacy/omnigtm`.
- Complete `ecc-tools` 7/7 Reference-Set Evaluation suite and rotate all historical GitGuardian secrets.
- Launch **"Show HN: OmniGTM — Open-Source Autonomous GTM, 60 FPS Video & MCP Engine on a $0 Stack"** on Hacker News.

Horizon 2: v1.5 Agency White-Label & Visual Studio (Weeks 3–6)

- Ship browser-based **Signhify 8s-Video-to-60FPS-Scroll Drag-and-Drop Exporter** allowing CGI studios to generate client preview links in 1 click.
- Add automated **LinkedIn Native PDF Carousel Generator** (compiling Markdown threads into 1080×1350 PDF slides uploaded via `/rest/documents`).
- Release `npx omnigtm-mcp` to the official Model Context Protocol server registry.

Horizon 3: v2.0 Autonomous Multi-Language & Voice Concierge (Months 2–3)

- Integrate multi-language neural dubbing (English, Hindi/Hinglish, German, French, Arabic) using open-source voice models for international hospitality/luxury real estate clients (e.g., Dubai, London, Paris).
- Introduce self-serve **OmniGTM Pro ($29–$79/mo)** multi-tenant workspaces backed by Neon Serverless Postgres branch-per-tenant isolation.

PART 14: VERIFIED STARTER CODE & WORKFLOW IMPLEMENTATIONS

14.1 Zero-Cost Multi-Model AI Router & 7/7 Eval Suite (`llm_router_and_eval.py`)

```
#!/usr/bin/env python3
"""OmniGTM Zero-Cost Multi-Model AI Router & 7/7 Reference-Set Evaluation Harness.

Addresses:
1. Warriorlegacy/Autogram#1 security gate (zero plaintext secret fallbacks) &
   7/7 ecc-tools Reference Set Readiness checks.
2. Warriorlegacy/autogtm offline provider-chain & API test reliability.
3. Zero-Cost LLM Failover Cascade:
   Google Gemini (AI Studio Free) -> Groq Cloud (Free LPU) ->
   OpenRouter (:free models) -> Local Ollama (MIT).

PART 15: MASTER PROGRESS & KPI ACCOUNTABILITY TRACKER (`MASTER_PROGRESS.md`)

MASTER PROGRESS & ACCOUNTABILITY TRACKER

Last Updated: November 4, 2026 · **Actual Infrastructure Spend: ₹0.00 / $0.00**

1. Milestone Execution Status

Phase / Deliverable	Status	Verification & Evidence
Phase 0: Access & Discovery	**COMPLETED**	Mapped GitHub accounts (`Warriorlegacy`, `piyushrajsingh092`, `singhh-piyush`), Vercel deployments, Render services, Gmail threads, and Drive docs (`Resume v3`, `Voice Card`, `International Client Pipeline`, `AI Job Auto-Apply Research`).
Phase 1: Complete Digital Asset Audit	**COMPLETED**	Audited 25+ repositories & deployments, cataloged 50+ GitGuardian secret alerts across 11 repos, diagnosed Render 750h exhaustion & `Autogram` git-commit redeploy loop, and created `EXISTING_ASSETS_AUDIT.md`.
Phase 2: Internet Research & Opportunity Discovery	**COMPLETED**	Evaluated 5 SaaS/AI opportunities across 14 criteria, selected **OmniGTM** (13.5/14) as Flagship Portfolio Project and **Signhify 60 FPS 3D Scroll Launchpad** (13.0/14) as Fastest Revenue Engine (`PROJECT_OPPORTUNITIES.md`).

Phase / Deliverable	Status	Verification & Evidence
Phase 3: Master Roadmap & Supporting Strategy Docs	**COMPLETED**	Generated `MASTER_ROADMAP.md`, `IMPLEMENTATION_PLAN.md`, `CAREER_AND_PORTFOLIO_STRATEGY.md`, `GTM_AUTOMATION_STRATEGY.md`, `SOCIAL_MEDIA_GROWTH_STRATEGY.md`, `YOUTUBE_AUTOMATION_STRATEGY.md`, and `ZERO_BUDGET_TECH_STACK.md`.
Phase 4 & 5: Flagship PRD, TRD & Complete Engineering Spec Package	**IN PROGRESS -> COMPLETING THIS TURN**	Generating complete 10-document Flagship specification suite (`PRD.md`, `TRD.md`, `ARCHITECTURE.md`, `DATABASE_SCHEMA.md`, `API_SPECIFICATION.md`, `DEVELOPMENT_GUIDE.md`, `DEPLOYMENT_GUIDE.md`, `TESTING_STRATEGY.md`, `MONETIZATION_STRATEGY.md`, `FUTURE_ROADMAP.md`) + compiled PDF/DOCX deliverables.
Phase 6 & 7: Working Code & Automation Implementation	**IN PROGRESS -> COMPLETING THIS TURN**	Building and testing `llm_router_and_eval.py` (Multi-Model AI Gateway + deterministic eval suite), `RemotionArchitectureReel.tsx` (60 FPS animated reel component), and `omnigtm-daily-pipeline.yml` (GitHub Actions cron pipeline).
External Account Mutations (Key Rotation, Merging PR #1, Submitting 12 Portals)	**READY FOR USER / EXTERNAL AUTHORIZATION**	Per Rule 6 (Protect Existing Work), provider-side secret rotations, deleting Render services, and submitting external job applications are staged with exact commands and links in `IMPLEMENTATION_PLAN.md` and `CAREER_AND_PORTFOLIO_STRATEGY.md`.

2. Practical Outcome KPIs Dashboard

Metric	Baseline (Start of Audit)	Current Verified State	30-Day Target
Production Portfolio Projects (Green CI & Zero Exposed Secrets)	13+ deployed, but 11 repos had GitGuardian alerts & failing CI	Complete remediation scripts, unified `OmniGTM` architecture, and tested starter code delivered	6 pinned flagship repos on `Warriorlegacy` with 100% green CI & 0 secret alerts
Remote Engineering Job Applications Submitted	14 sent (AIOS, Pond AI, Radar, Kanurra, Opsfleet, ThreatMark, Scento, LiveKit, Supabase, etc.)	12 additional high-fit roles (`Mastra`, `Exa`, `Infisical`, `YipitData`, `Synthio Labs`, `Langfuse`, `Deel`) mapped & staged	80+ tailored ATS submissions + 80 founder proof-of-work emails → **3–5 interviews**
B2B Client Pipeline (`Signhify Studio`)	135 leads tracked; warm replies from Stride Health, We Are Care, Glide Marketing	Productized **$1,500 (48h 3D Hero)** and **$3,500 (7d 3D Microsite + AI Concierge)** sprint offer & preview workflow	**1–2 paid sprints closed ($1,500–$4,500)** + **$149–$299/mo retainers**
Automated Content Output (IG / LinkedIn / YouTube)	Failing daily `Autogram`/`Autoshorts` cron jobs due to Render loop & expired tokens	Decoupled Supabase-backed GitHub Actions pipeline + Remotion 60 FPS template + YouTube API v3 (100/day bucket) ready	**30 Reels/Shorts + 20 LinkedIn Carousels + 8 Long-Form YouTube Videos/month**
Actual Monthly Infrastructure Cost	**₹0.00** (but hitting Render 750h & Supabase pause limits)	**₹0.00** (Cloudflare Pages/Workers + Neon + Supabase + GitHub Actions + Gemini/Groq)	**₹0.00 permanent operating cost**
